Festschrift Series:**

From Mental Imagery to Spatial Cognition and Language Valérie Gyselinck, Francesca Pazzaglia, 2012-10-02 The nature of mental images and their relation to language has caused controversy amongst psychologists for years and the so called imagery debate is still unresolved Fresh light is now being shed on this topic using recent findings in neuroscience and the development of behavioural studies Reviewing state of the art research in the field of imagery visuo spatial memory spatial representation and language with special emphasis on their interactions the volume shows how and to what extent findings from the studies on imagery can positively influence and enrich other psychological areas such as Working memory Space and time representation Language and embodiment Chapter 9 written by Michel Denis to whom this book is dedicated analyses more than three decades of research and outlines the shared scientific journey of friendship and discovery that has developed across various cognitive topics all of which are linked to and inspired by imagery conceptualization This is the only book to present a critical outline of research on these topics in a single volume and as such will be invaluable to advanced undergraduates postgraduates and researchers in such fields as cognitive psychology neuroscience computer science and neuropsychology

Representations in Mind and World Jeffrey M. Zacks, Holly A. Taylor, 2017-07-20 This volume pulls together interdisciplinary research on cognitive representations in the mind and in the world The chapters from cutting edge researchers in psychology philosophy computer science and the arts explore how structured representations determine cognition in memory spatial cognition information visualization event comprehension and gesture It will appeal to graduate level cognitive scientists technologists philosophers linguists and educators

The Fall of the Word and the Rise of the Mental Model Frode J. Strømnes, 2006-01-01 The use of mental imagery and mental models can make a substantial difference to language and thinking which improve by using them This happens because knowledge can only be stored in homeomorphic spatial structures Words are addresses that the brain uses to locate the simulacra it has stored Accordingly the traditional view of knowledge is untenable knowledge is not stored in language like propositions The philosophical and mathematical arguments claiming propositions exist are erroneous Language is learned naturally when words sentences and the structure of the situation are experienced simultaneously Grammars are geometrical systems that cannot be expressed in words Their diverse geometries result in different experiential and behavioural consequences for different languages

Space to Reason Markus Knauff, 2013 An argument against the role of visual imagination in reasoning that proposes a spatial theory of human thought supported by empirical and computational evidence Many scholars believe that visual mental imagery plays a key role in reasoning In Space to Reason Markus Knauff argues against this view proposing that visual images are not relevant for reasoning and can even impede the process He also argues against the claim that human thinking is solely based on abstract symbols and is completely embedded in language Knauff proposes a third way to think about

human reasoning that relies on supramodal spatial layout models which are more abstract than pictorial images and more concrete than linguistic representations He argues that these spatial layout models are at the heart of human thought even thought about nonspatial relations in the world For Knauff the visual images that we so often associate with reasoning are only in the foreground of conscious experience Behind the images the actual logical work is carried out by reasoning specific operations on these spatial layout models Knauff also offers a solution to the problem of indeterminacy in human reasoning introducing the notion of a preferred layout model which is one layout model among others that has the best chance of being mentally constructed and thus guides the further process of thought Knauff's space to reason theory covers the functional the algorithmic and the implementational level of analysis and is corroborated by psychological experiments functional brain imaging and computational modeling

Spatial Representation Naomi Eilan, Rosaleen A. McCarthy, Bill Brewer, 1999 *Spatial Representation* presents original specially written essays by leading psychologists and philosophers on a fascinating set of topics at the intersection of these two disciplines They address such questions as these Do the extraordinary navigational abilities of birds mean that these birds have the same kind of grip on the idea of a spatial world as we do Is there a difference between the way sighted and blind subjects represent the world out there Does the study of brain injured subjects such as blind seers tell us anything about the working of normal spatial consciousness The essays are arranged into five sections each of which reflects a central area of research into spatial cognition and opens with a short introduction by the editors designed to facilitate cross disciplinary reading The volume as a whole offers a rich and compelling expression of the view that to advance our understanding of the way we represent the external world it is necessary to draw on both philosophical and psychological approaches

Neuropsychology and Philosophy of Mind in Process Maria Pachalska, Michel Weber, 2013-05-02 This volume celebrates the life achievements of Jason W Brown who along with Jean Piaget Heinz Werner Alexander Luria and the W rzburg school has significantly contributed to the development of a process based theory of brain mind capable of challenging the currently fashionable modularist or cybernetic approaches to understanding human thought and feeling As a paradigm Brown's microgenetic theory is thus applicable in both brain science where Brown was inspired by the pioneering work of Schilder and Pick and the philosophy of mind where the influence of Bergson Whitehead Cassirer and Merleau Ponty can be seen Essays with a range of focus as wide as Brown's expertise have been collected in such diverse areas as neuropsychology microstructure of action symptomatology neuro rehabilitation neurolinguistics locationism theoretical psychology consciousness hypnosis morphogenesis personality development psychoanalysis Buddhist psychology mysticism and philosophy of mind evolutionary epistemology emergence novelty creativity subjectivity will and action Whiteheadian process philosophy

The Spatial Foundations of Language and Cognition Kelly S. Mix, Linda B. Smith, Michael Gasser, 2009-12-24 This book presents recent research on the role of space as a mechanism in language use and learning It proceeds from the notion that cognition in real time developmental time and over evolutionary time occurs in

space and that the physical properties of space may provide insights into basic cognitive processes including memory attention action and perception It looks at how physical space and landmarks are used in cognitive representations and serve as the basis of human cognition in a range of core mechanisms to index memories and ground meanings that are not themselves explicitly about space The editors have brought together experimental psychologists computer scientists robotocists linguists and researchers in child language in order to consider the nature and applications of this research and in particular its implications for understanding the processes involved in language acquisition

Cognition and Figurative Language Richard P. Honeck, Robert R. Hoffman, 2018-10-31 Originally published in 1980 this is a book about the psychology of figurative language It is however eclectic and therefore should be of interest to professionals and students in education linguistics philosophy sociolinguistics and other concerned with meaning and cognition The editors felt there was a pressing need to bring together the growing empirical efforts of this topic In a sense recognition of the theoretical importance of figurative language symbolized the transition from the psycholinguistics of the 1960s to that of the late 1970s that is from a linguistic semantics to a more comprehensive psychological semantics with a healthy respect for context inference world knowledge and above all creative imagination The organization of the volume reflects the more basic general concerns with cognition from historical and philosophical background through problems of mental representation and semantic theory to developmental trends and to applications in problem solving

The Conceptual Mind Eric Margolis, Stephen Laurence, 2015-05-22 New essays by leading philosophers and cognitive scientists that present recent findings and theoretical developments in the study of concepts The study of concepts has advanced dramatically in recent years with exciting new findings and theoretical developments Core concepts have been investigated in greater depth and new lines of inquiry have blossomed with researchers from an ever broader range of disciplines making important contributions In this volume leading philosophers and cognitive scientists offer original essays that present the state of the art in the study of concepts These essays all commissioned for this book do not merely present the usual surveys and overviews rather they offer the latest work on concepts by a diverse group of theorists as well as discussions of the ideas that should guide research over the next decade The book is an essential companion volume to the earlier *Concepts Core Readings* the definitive source for classic texts on the nature of concepts The essays cover concepts as they relate to animal cognition the brain evolution perception and language concepts across cultures concept acquisition and conceptual change concepts and normativity concepts in context and conceptual individuation The contributors include such prominent scholars as Susan Carey Nicola Clayton Jerry Fodor Douglas Medin Joshua Tenenbaum and Anna Wierzbicka Contributors Aurore Avargu s Weber Eef Ameel Megan Bang H Clark Barrett Pascal Boyer Elisabeth Camp Susan Carey Daniel Casasanto Nicola S Clayton Dorothy L Cheney Vyvyan Evans Jerry A Fodor Silvia Gennari Tobias Gerstenberg Martin Giurfa Noah D Goodman J Kiley Hamlin James A Hampton Mutsumi Imai Charles W Kalish Frank Keil Jonathan Kominsky Stephen Laurence Gary Lupyan Edouard Machery

Fodor, 2010-07-15 Jerry Fodor presents a new development of his famous Language of Thought hypothesis which has since the 1970s been at the centre of interdisciplinary debate about how the mind works Fodor defends and extends the groundbreaking idea that thinking is couched in a symbolic system realized in the brain This idea is central to the representational theory of mind which Fodor has established as a key reference point in modern philosophy psychology and cognitive science The foundation stone of our present cognitive science is Turing s suggestion that cognitive processes are not associations but computations and computation requires a language of thought So the latest on the Language of Thought hypothesis from its progenitor promises to be a landmark in the study of the mind *LOT 2* offers a more cogent presentation and a fuller explication of Fodor s distinctive account of the mind with

various intriguing new features The central role of compositionality in the representational theory of mind is revealed most of what we know about concepts follows from the compositionality of thoughts Fodor shows the necessity of a referentialist account of the content of intentional states and of an atomistic account of the individuation of concepts Not least among the new developments is Fodor s identification and persecution of pragmatism as the leading source of error in the study of the mind today LOT 2 sees Fodor advance undaunted towards the ultimate goal of a theory of the cognitive mind and in particular a theory of the intentionality of cognition No one who works on the mind can ignore Fodor s views expressed in the coruscating and provocative style which has delighted and disconcerted countless readers over the years **Mental Spaces** Gilles Fauconnier,1994-08-26 First published in 1985 MIT Press Fauconnier s influential book Mental Spaces was instrumental in shaping the new field of cognitive linguistics The concept of mental spaces that we develop constructs during discourse that are distinct from linguistic constructs but are established by linguistic expressions provides a powerful new approach to problems in philosophy and cognitive science concerning thought and language It includes a new preface that provides context for the theory and a new foreword by George Lakoff and Eve Sweetser both of U C Berkeley **Language, Mind and Body** John E. Joseph,2018 Where is language Centuries of efforts to incorporate language lie behind current concepts of extended mind and embodied cognition This book examines this question **The Spatial Foundations of Cognition and Language** Kelly S. Mix,Linda B. Smith,Michael Gasser,2009-12-24 This book presents recent research on the role of space as a mechanism in language use and learning Experimental psychologists computer scientists robotocists linguists and researchers in child language consider the nature and applications of this research and its implications for understanding the processes involved in language acquisition **The Language of Thought** Jerry A. Fodor,1975 In a compelling defense of the speculative approach to the philosophy of mind Jerry Fodor argues that while our best current theories of cognitive psychology view many higher processes as computational computation itself presupposes an internal medium of representation Fodor s prime concerns are to buttress the notion of internal representation from a philosophical viewpoint and to determine those characteristics of this conceptual construct using the empirical data available from linguistics and cognitive psychology Perception, Cognition, and Language ,2000

This book delves into From Mental Imagery To Spatial Cognition And Language Essays In Honour Of Michel Denis Psychology Press Festschrift Series. From Mental Imagery To Spatial Cognition And Language Essays In Honour Of Michel Denis Psychology Press Festschrift Series is a crucial topic that must be grasped by everyone, ranging from students and scholars to the general public. The book will furnish comprehensive and in-depth insights into From Mental Imagery To Spatial Cognition And Language Essays In Honour Of Michel Denis Psychology Press Festschrift Series, encompassing both the fundamentals and more intricate discussions.
