Fundamentals of Business Process Management, 2013-02-26

Business Process Management Mathias Weske, 2012-05-03 Business process management is usually treated from two different perspectives business administration and computer science While business administration professionals tend to consider information technology as a subordinate aspect in business process management for experts to handle by contrast computer science professionals often consider business goals and organizational regulations as terms that do not deserve much thought but require the appropriate level of abstraction Matthias Weske argues that all communities involved need to have a common understanding of the different aspects of business process management To this end he details the complete business process lifecycle from the modeling phase to process enactment and improvement taking into account all different stakeholders involved After starting with a presentation of general foundations and abstraction models he explains concepts like process orchestrations and choreographies as well as process properties and data dependencies Finally he presents both traditional and advanced business process management architectures covering for example workflow management systems service oriented architectures and data driven approaches In addition he shows how standards like WfMC SOAP WSDL and BPEL fit into the picture This textbook is ideally suited for classes on business process management information systems architecture and workflow management This 2nd edition contains major updates on BPMN Version 2 process orchestration and process choreographies and the chapter on BPM methodologies has been completely rewritten The accompanying website www.bpm-book.com contains further information and additional teaching material

Tax Law and Digitization Michael Lang, Robert Risse, 2022-07-04 Tax tech companies are rapidly gaining ground as global tax advisory firms and are set to fundamentally change and revolutionize the way tax administrations taxpayers and their advisers interact ushering in a much more efficient and effective integration of tax services into the processes used by both taxpayers and tax authorities The distinguished contributors to this book clearly explain not only how tax law can be revised to promote digitization and speed up its implementation but also how to achieve better tax compliance and administration at a lower cost The authors cover such aspects of this veritable paradigm shift in tax management as the following how new technologies improve existing VAT GST systems uses of artificial intelligence secured certification of taxpayers electronic invoices securing real time reporting with cryptography taxing virtual currencies enhanced personal data protection fewer opportunities to engage in aggressive tax practices competitive advantage in attracting investment work flow assessment and more opportunities for information flows and collaboration Because the perspective as to what is meant by tax compliance is already overlaid by technological pressure as indicated especially by BEPS 1.0's domestic tax law initiatives and its recommendations of newly developed options to secure full transparency of tax processes it is clear that controls and tax risk management are on the rise and that systems will become more digitized For these reasons professionals in the tax advisory industry and tax authority officials will welcome this book's sound and practical measures leading to progress and revitalization through digital transformation

Enterprise Process Management Systems Vivek Kale, 2018-10-10 Enterprise Process Management Systems Engineering Process Centric Enterprise Systems using BPMN 2.0 proposes a process centric paradigm to replace the traditional data centric paradigm for Enterprise Systems ES ES should be reengineered from the present data centric enterprise architecture to process centric process architecture to be called as Enterprise Process Management Systems EPMS The real significance of business processes can be understood in the context of current heightened priority on digital transformation or digitalization of enterprises Conceiving the roadmap to realize a digitalized enterprise via the business model innovation becomes amenable only from the process centric view of the enterprise This pragmatic book Introduces Enterprise Process Management Systems EPMS solutions that enable an agile enterprise Describes distributed systems and Service Oriented Architecture SOA that paved the road to EPMS Leverages SOA to explain the cloud based realization of business processes in terms of Web Services Describes how BPMN 2.0 addresses the requirements for agility by ensuring a seamless methodological path from process requirements modeling to execution and back to enable process improvements Presents the spreadsheet driven Spreadsheets Application Development SAD methodology for the design and development of process centric application systems Describes process improvement programs ranging right from disruptive programs like BPR to continuous improvement programs like lean six sigma and TOC Enterprise Process Management Systems Engineering Process Centric Enterprise Systems using BPMN 2.0 describes how BPMN 2.0 can not only capture business requirements but it can also provide the backbone of the actual solution implementation Thus the same diagram prepared by the business analyst to describe the business s desired To Be process can also be used to automate the execution of that process on a modern process engine

High Performance Through Business Process Management Mathias Kirchmer, 2017-03-09 This management book presents value driven business process management as a successful discipline to turn strategy into people and technology based execution quickly and at minimal risk It shows how to achieve high performance successfully in a digital business environment Static business models do not keep pace with the dynamic changes in our digital world

Organizations need a management approach that fits this environment and capitalizes on its opportunities while minimizing the related risks. They need to execute their business strategy fast and reliably. In effect, they have to know how and when to modify or enhance their business processes, which processes are the best candidates for intervention, and how to move rapidly from strategy to execution. This means organizations need to establish business process management as a real management discipline. The importance of process innovation, digital technology, and people aspects, process governance, internationalization, emerging processes, and the unique situation in mid-market organizations are some of the key topics discussed in this book. It ends with a comprehensive case study and a discussion about what process engineers can learn from jazz musicians.

Business Process Management Wil, van der Aalst, Jörg Desel, Andreas Oberweis, 2003-07-31 Business processes are among today's hottest topics in the science and practice of information systems. Business processes and workflow management systems attract a lot of attention from R & D professionals in software engineering, information systems, business-oriented computer science, and management sciences. The carefully reviewed chapters contributed to this state of the art survey by internationally leading scientists consolidate work presented at various workshops on the topic organized by the editors of the book in the past few years. The book spans the whole spectrum of business process management, ranging from theoretical aspects, conceptual models, and application scenarios to implementation issues. It will become a valuable source of reference and information for R & D professionals active in the fascinating interdisciplinary area of business process management and for ambitious practitioners.

Electronic Commerce, 2008 This collection compiles a critical mass of top research, nearly 300 chapters from upwards of 400 of the world's leading experts, to provide libraries with a landmark four-volume reference to meet research needs in the many disciplines impacted by these far-reaching topics. This collection covers topics including mobile commerce, virtual enterprises, business-to-business applications, Web services, and enterprise methodologies. Provided by publisher.

Business Process Automation August-Wilhelm Scheer, Ferri Abolhassan, Wolfram Jost, Mathias Kirchmer, 2012-11-07 Enterprises have to adapt their business processes quickly and efficiently to new business environments to ensure business success and long-term survival. It is not sufficient to apply best business practices; but new practices have to be developed and executed. These requirements are met by new business process automation technologies based on concepts like web services, EAI, workflow, enterprise service architectures, and automation engines. Business process automation becomes a key enabler for business process excellence. This book explains major trends in business process automation and shows how new technologies and solutions are applied in practice. It outlines how process automation becomes an element of an overall process lifecycle management approach structured on the basis of the ARIS House of business excellence and implemented through software tools like the ARIS toolset.
