Managing Business and Service Networks Lundy Lewis, 2005-12-07 Most everything in our experience requires management in some form or other our gardens our automobiles our minds our bodies our love lives our businesses our forests our countries etc Sometimes we don't call it management per se We seldom talk about managing our minds or automobiles But if we think of management in terms of monitoring maintaining and cultivating with respect to some goal then it makes sense We certainly monitor an automobile albeit unconsciously to make sure that it doesn't exhibit signs of trouble And we certainly try to cultivate our minds This book is about managing networks That itself is not a new concept We've been managing the networks that support our telephones for about 100 years and we've been managing the networks that support our computers for about 20 years What is new and what motivated me to write this book is the following i the enormous advancements in networking technology as we transition th st from the 20 century to the 21 century ii the

increasing dependence of human activities on networking technology and iii the commercialization of services that depend on networking technology e g email and electronic commerce
