GEOLOGICAL FIELD TECHNIQUES The understanding of Earth processes and environments over geological time is highly dependent upon both the experience that can only be gained through doing fieldwork and the collection of reliable data and appropriate samples in the field This textbook explains the main data gathering techniques used by geologists in the field and the reasons for these with emphasis throughout on how to make effective field observations and record these in suitable formats Equal weight is given to assembling field observations from igneous metamorphic and sedimentary rock types There are also substantial chapters on producing a field notebook collecting structural information recording fossil data and constructing geological maps Geological Field Techniques is designed for students amateur enthusiasts and professionals who have a background in geology and wish to collect field data on rocks and geological features Teaching aspects of this textbook include step by step guides to essential practical skills such as using a compass clinometer making a geological map and drawing a field sketch tricks of the trade checklists flow charts and short worked examples over 200 illustrations of a wide range of field notes maps and geological features appendices with the commonly used rock description and classification diagrams a supporting website hosted by Wiley Blackwell is available at www.wiley.com/go/coe/geology

The Maritime Political Boundaries of the World Victor Prescott, Clive Schofield, 2005-01-01 This book addresses the often vexed question of national maritime claims and the delimitation of international maritime boundaries The number of undelimited international maritime boundaries is much larger than the number of agreed lines The two boundaries that

define the marine domain of coastal states are examined First the baselines along the coast may consist of low water lines or straight lines or a combination of both When straight lines are used they define the seaward limit of the state s internal waters Second the outer limits of claims to territorial seas contiguous zones and exclusive economic zones are measured from the baselines All states will have to delimit at least one international boundary with a neighbouring state whether adjacent or opposite In confined seas no state can claim the full entitlement and must negotiate international boundaries with all neighbours Many states bordering oceans can claim the full entitlement seawards although they will need to delimit national boundaries with adjacent neighbours
