The Central Nervous System Per Brodal, 2010-03-29 A textbook of neuroscience for undergraduate medical students providing a concise yet critical treatment of structure function relationships as a basis for clinical thinking It aims at conveying an understanding of how the nervous system performs its tasks by using data from molecular biology to clinical neurology

Cognitive Neuroscience of Language David Kemmerer, 2014-11-20 Language is one of our most precious and uniquely human capacities so it is not surprising that research on its neural substrates has been advancing quite rapidly in recent years Until now however there has not been a single introductory textbook that focuses specifically on this topic Cognitive Neuroscience of Language fills that gap by providing an up to date wide ranging and pedagogically practical survey of the most important developments in the field It guides students through all of the major areas of investigation beginning with fundamental aspects of brain structure and function and then proceeding to cover aphasia syndromes the perception and production of speech the processing of language in written and signed modalities the meanings of words and the formulation and comprehension of complex expressions including grammatically inflected words complete sentences and entire stories Drawing heavily on prominent theoretical models the core chapters illustrate how such frameworks are supported and sometimes challenged by experiments employing diverse brain mapping techniques Although much of the content is inherently challenging and intended primarily for graduate or upper level undergraduate students it requires no previous knowledge of either neuroscience or linguistics defining technical terms and explaining important principles from both disciplines along the way

Proust Was a Neuroscientist Jonah Lehrer, 2008-09-01 The New York Times bestselling author provides an entertaining look at how artists enlighten us about the workings of the brain New York magazine In this book the author of *How We Decide* and *Imagine How Creativity Works* writes skillfully and coherently about both art and science and about the connections between the two Entertainment Weekly In this technology driven age it is tempting to believe that science can solve every mystery After all it has cured countless diseases and sent humans into space But as Jonah Lehrer explains science is not the only path to knowledge In fact when it comes to understanding the brain art got there first Taking a group of artists a painter a poet a chef a composer and a handful of novelists Lehrer shows how each one discovered an essential truth about the mind that science is only now rediscovering We learn for example how Proust first revealed the fallibility of memory how George Eliot discovered the brain's malleability how the French chef Escoffier discovered umami the fifth taste how Cézanne worked out the subtleties of vision and how Gertrude Stein exposed the deep structure of language a full half century before the work of Noam Chomsky and other linguists More broadly Lehrer shows that there is a cost to reducing everything to atoms and acronyms and genes Measurement is not the same as understanding and art knows this better than science does An ingenious blend of biography criticism and first rate science writing *Proust Was a Neuroscientist* urges science and art to listen more closely to each other for willing minds can combine the best of both to

brilliant effect His book marks the arrival of an important new thinker Wise and fresh Los Angeles Times *GERIATRIC FORENSIC PSYCHIATRY* Dr Jacob Holzer, Dr Robert Kohn, Dr James Ellison, Dr Patricia Recupero, 2017-11-30 Geriatric Forensic Psychiatry Principles and Practice is one of the first texts to provide a comprehensive review of important topics in the intersection of geriatric psychiatry medicine clinical neuroscience forensic psychiatry and law It will speak to a broad audience among varied fields including clinical and forensic psychiatry and mental health professionals geriatricians and internists attorneys and courts regulators and other professionals working with the older population Topics addressed in this text applied to the geriatric population include clinical forensic evaluation regulations and laws civil commitment different forms of capacity guardianship patient rights medical legal issues related to treatment long term care and telemedicine risk management patient safety and error reduction elder driving sociopathy and aggression offenders and the adjudication process criminal evaluations corrections ethics culture cognitive impairment substance abuse trauma older professionals high risk behavior and forensic mental health training and research Understanding the relationship between clinical issues laws and regulations and managing risk and improving safety will help to serve the growing older population

Neuroscience in Information Systems Research René Riedl, Fred D. Davis, Rajiv Banker, Peter H. Kenning, 2017-01-25 This book shows how information systems IS scholars can effectively apply neuroscience expertise in ways that do not require neuroscience tools However the approach described here is intended to complement neuroscience tools not to supplant them Written by leading scholars in the field it presents a review of the empirical literature on NeuroIS and provides a conceptual description of basic brain function from a cognitive neuroscience perspective Drawing upon the cognitive neuroscience knowledge developed in non IS contexts the book enables IS scholars to reinterpret existing behavioral findings develop new hypotheses and eventually test the hypotheses with non neuroscience tools At its core the book conveys how neuroscience knowledge makes a deeper understanding of IS phenomena possible by connecting the behavioral and neural levels of analysis
