

PROCESS SAFETY FUNDAMENTALS

We respect hazards

- We improve our understanding of process safety hazards at our location and our roles in controlling them.
- We are vigilant about the potential impacts of uncontrolled process safety hazards.
- We discuss process safety hazards before starting a task.
- We bring forward process safety hazards to be included in activity risk assessments.

We apply procedures

- We use operating and maintenance procedures, even if we are familiar with the task.
- We discuss the key steps within a critical procedure before starting it.
- We pause before key steps and check readiness to progress.
- We stop, inform supervision and avoid workarounds if procedures are missing, unclear, unsafe, or cannot be followed.
- We take time to become familiar with, and practice, emergency procedures.

We sustain barriers

- We discuss the purpose of hardware and human barriers at our location.
- We evaluate how our tasks could impact process safety barriers.
- We speak up when barriers don't feel adequate.
- We perform our roles in maintaining barrier health and alert supervision to our concerns.
- We use an approval process for operations with degraded barriers.

We stay within operating limits

- We discuss and use the approved operating limits for our location.
- We escalate where we cannot work within operating limits.
- We alert supervision if an alarm response action is unclear or the time to respond is inadequate.
- We obtain formal approval before changing operating limits.
- We confirm that potential for overpressure from temporary pressure sources has been addressed.

We maintain safe isolation

- We use isolation plans for the specific task, based on up-to-date information.
- We raise isolation concerns before the task starts and challenge when isolation plans cannot be executed.
- We check for residual pressure or process material before breaking containment.
- We monitor the integrity of isolations regularly and stop to reassess when change could affect an isolation integrity.
- We confirm task rightness before, during, and after restarting equipment.

We walk the line

- We use up-to-date documentation (e.g., Piping and Instrumentation Diagrams) that accurately reflect installed systems and equipment.
- We physically confirm the system is ready for the intended activity (e.g., valve positions, line up of relief devices, etc.).
- We alert supervision to identified documentation and readiness issues before operation.

We control ignition sources

- We identify, eliminate, or control the full range of potential ignition sources during task risk assessments and during job preparation and execution.
- We minimize and challenge ignition sources even in "non-hazardous" areas.
- We eliminate ignition sources during breaking containment and start-up and shutdown operations.

We recognise change

- We look for and speak up about change.
- We discuss changes and involve others to identify the need for management of change (MOC).
- We review the MOC process for guidance on what triggers an MOC.
- We discuss and seek advice on change that occurs gradually over time.

We stop if the unexpected occurs

- We discuss the work plan and what signals would tell us it is proceeding as expected.
- We pause and ask questions when signals and conditions are not as expected.
- We stop and alert supervision if the activity is not proceeding as expected.

We watch for weak signals

- We proactively look for indicators or signals that suggest future problems.
- We speak up about potential issues even if we are not sure they are important.
- We persistently explore the causes of changing indicators or unusual situations.

Fundamentals Of Process Safety:

Fundamentals of Process Safety Victor Christopher Marshall, Steve Ruhemann, 2001 This text primarily aimed at students of the fundamentals for process safety presents the fundamentals of process safety in such a form those students who typically lack such prior knowledge and experience will fully understand and absorb the subject The knowledge is presented in a coherent integrated academic framework which is founded in fundamental science especially in the disciplines of physics and chemistry The text should help students find the subject more amenable to systematic study and more clearly related to other subjects covered in their curriculum The information has been used in the teaching of a Process Safety module to undergraduate students of chemical engineering at the University of Bradford *Chemical Process Safety* Daniel A. Crowl, Joseph F. Louvar, 2001-10-16 Combines academic theory with practical industry experience Updated to include the latest regulations and references Covers hazard identification risk assessment and inherent safety Case studies and problem sets enhance learning Long awaited revision of the industry best seller This fully revised second edition of Chemical Process Safety Fundamentals with Applications combines rigorous academic methods with real life industrial experience to create a unique resource for students and professionals alike The primary focus on technical fundamentals of chemical process safety provides a solid groundwork for understanding with full coverage of both prevention and mitigation measures Subjects include Toxicology and industrial hygiene Vapor and liquid releases and dispersion modeling Flammability characterization Relief and explosion venting In addition to an overview of government regulations the book introduces the resources of the AIChE Center for Chemical Process Safety library Guidelines are offered for hazard identification and risk assessment The book concludes with case histories drawn directly from the authors experience in the field A perfect reference for industry professionals Chemical Process Safety Fundamentals with Applications Second Edition is also ideal for teaching at the graduate and senior undergraduate levels Each chapter includes 30 problems and a solutions manual is now available for instructors
