Enterprise Management Control Systems in China Xianzhi Zhang, 2014-04-30. This book provides an exhaustive view of China's Management Control Systems (MCS), examining the development of theory and practice and presenting a framework that integrates China's unique enterprise regulations, corporate culture and managerial mindset into management control systems. The work offers detail about the effects of China's economic reforms on management control in Chinese enterprises and insightful comparisons with Western theory and Western examples. Readers will discover important themes and the evolution of theory in MCS including discussions of frameworks and the links between management control and economics, management accounting, cybernetics and system theory. Early chapters explore management control in Chinese enterprises during the period especially the demands of guidance, enforcement and external regulation and the demand for stakeholders: managers, investors, management control. The work moves on to explore Western management control theory and research including an examination of the evolution of internal control theory. The author presents detailed perspectives on the elements of management control systems and introduces masterful new ideas and methods through four general control models and ten critical elements in the management control process. A view of management control in various different types of enterprise is presented from special enterprises and small to medium enterprises to non-profit organizations. The standards for enterprise management control are explored. This work is a valuable practical guide for corporate management teams who wish to develop and execute their own internal control strategies. It will also provide foreign researchers, policy makers and practitioners with a new perspective on Chinese management control experiences. **Understanding**

Competitive Advantage Fredrik Nilsson, Birger Rapp, 2005 This book is about competitive advantage and how it is created at the company level Our theoretical starting point is that the alignment of strategies and control systems affects the firm's chances of successfully positioning itself in its chosen area of competition The firm is in a better position to concentrate on activities that create value for the customer if its strategies and control systems are mutually consistent and adapted to expected external demands This book is thus a contribution to the literature that treats competitive advantage on the basis of the match between the environment and internal resources Our ambition has been to provide additional knowledge in the area through a comprehensive discussion on coordination and integration of strategies and control systems
