Light Scattering Reviews 4 Alexander A. Kokhanovsky, 2009-07-25 This fourth volume of Light Scattering Reviews is composed of three parts The first part is concerned with theoretical and experimental studies of single light scattering by small nonspherical particles Light scattering by small particles such as for instance droplets in the terrestrial clouds is a well understood area of physical optics On the other hand exact theoretical calculations of light scattering patterns for most of nonspherical and irregularly shaped particles can be performed only for the restricted values of the size parameter which is proportional to the ratio of the characteristic size of the particle to the wavelength For the large nonspherical particles approximations are used e g ray optics The exact theoretical techniques such as the T matrix method cannot be used for

extremely large particles such as those in ice clouds because then the size parameter in the viblex 2 a wherea is the characteristic size radius for spheres and the associated numerical codes become unstable and produce wrong answers Yet another problem is due to the fact that particles in many turbid media e g dust clouds cannot be characterized by a single shape Often refractive indices also vary Because of problems with theoretical calculations experimental i e laboratory investigations are important for the characterization and understanding of the optical properties of such types of particles The rst paper in this volume written by B Gustafson is aimed at the descr

Cotton, 2008-09-30 Life on Earth is critically dependent upon the continuous cycling of water between oceans continents and the atmosphere Precipitation including rain snow and hail is the primary mechanism for transporting water from the atmosphere back to the Earth s surface It is also the key physical process that links aspects of climate weather and the global hydrological cycle Changes in precipitation regimes and the frequency of extreme weather events such as floods droughts severe ice snow storms monsoon fluctuations and hurricanes are of great potential importance to life on the planet One of the factors that could contribute to precipitation modification is aerosol pollution from various sources such as urban air pollution and biomass burning Natural and anthropogenic changes in atmospheric aerosols might have important implications for precipitation by influencing the hydrological cycle which in turn could feed back to climate changes From an Earth Science perspective a key question is how changes expected in climate will translate into changes in the hydrological cycle and what trends may be expected in the future We require a much better understanding and hence predictive capability of the moisture and energy storages and exchanges among the Earth s atmosphere oceans continents and biological systems This book is a review of our knowledge of the relationship between aerosols and precipitation reaching the Earth s surface and it includes a list of recommendations that could help to advance our knowledge in this area Charged Aerosol Detection for Liquid Chromatography and Related Separation Techniques Paul H. Marijnissen,2003-11-30 Aerosol therapy has significantly improved the treatment of a variety of respiratory diseases Besides the treatment of respiratory diseases there is currently also a great interest to use the lungs as a portal to introduce drugs for systemic therapy The success of therapy with the application of aerosolized medicaments depends on the possibility to deliver the proper amount of drug to the appropriate sites in the respiratory system thus limiting the side effects to a minimum Aerosolized delivery of drugs to the lung is optimized if for a given chemical composition of a medicine the target of deposition and the required mass of drug to be deposited are precisely defined The next step is the specification of the number of respirable particles or droplets to be generated by appropriate devices Another very important factor for successful aerosol therapy is the condition of the patient coupled with his or her inhalation technique *The Effects of Dust*
