

Alka Seltzer Reactions: An Inquiry-Based Investigation

In your lab groups, you will design, execute and interpret an experiment to test the effect of particle size on the reaction between Alka Seltzer tablets and water. You should be able to quantify your results in *at least* 1 way. Stronger experiments will include more than 1 type of quantitative data. (*Remember: "Quantitative" means you will be taking a measurement of something)

BACKGROUND:

Alka Seltzer is a combination of an acid ($\text{C}_6\text{H}_8\text{O}_7$) and baking soda (NaHCO_3). When the two react in water, they generate, among other things, Carbon Dioxide gas (CO_2).

This means that as the reaction proceeds, you will observe several changes, including bubbles that indicate the release and loss of the carbon dioxide gas. You must use these changes in order to quantify the rate and extent of the reaction.

PROBLEM: How will the size of Alka Seltzer particles affect the rate and extent of its reaction with water?

PREDICTION: What result do you expect to see in this experiment and why?
