Conquering the AMC 8 Jai Sharma,Rithwik Nukala, The American Mathematics Competition AMC series is a group of contests that judge students mathematical abilities in the form of a timed test The AMC 8 is the introductory level competition in this series and is taken by tens of thousands of students every year in grades 8 and below Students are given 40 minutes to complete the 25 question test Every right answer receives 1 point and there is no penalty for wrong or missing answers so the maximum possible score is 25 25 While all AMC 8 problems can be solved without any knowledge of trigonometry calculus or more advanced high school mathematics they can be tantalizingly difficult to attempt without much prior experience and can take many years to master because problems often have complex wording and test the knowledge of mathematical concepts that are not covered in the school curriculum This book is meant to teach the skills necessary to solve mostly any problem on the AMC 8 However our goal is to not only teach you how to perfect the AMC 8 but we also want you to learn and understand the topics presented as if you were in a classroom setting Above all the first and foremost goal is for you to have a good time learning math The units that will be covered in this book are the following Test Taking Strategies for the AMC 8 Number Sense in the AMC 8 Number Theory in the AMC 8 Algebra in the AMC 8 Counting and Probability in the AMC 8 Geometry in the AMC 8 Advanced Competition Tricks for the AMC 8 *Euclidean Geometry in Mathematical Olympiads* Evan Chen,2016-05-02 This is a challenging problem solving book in Euclidean geometry assuming nothing of the reader other than a good deal of courage Topics covered included cyclic quadrilaterals power of a point homothety triangle centers along the way the reader will meet such classical gems as the nine point circle the Simson line the symmedian and

the mixtilinear incircle as well as the theorems of Euler Ceva Menelaus and Pascal Another part is dedicated to the use of complex numbers and barycentric coordinates granting the reader both a traditional and computational viewpoint of the material The final part consists of some more advanced topics such as inversion in the plane the cross ratio and projective transformations and the theory of the complete quadrilateral The exposition is friendly and relaxed and accompanied by over 300 beautifully drawn figures The emphasis of this book is placed squarely on the problems Each chapter contains carefully chosen worked examples which explain not only the solutions to the problems but also describe in close detail how one would invent the solution to begin with The text contains as selection of 300 practice problems of varying difficulty from contests around the world with extensive hints and selected solutions This book is especially suitable for students preparing for national or international mathematical olympiads or for teachers looking for a text for an honor class *Trigonometry* James Tanton,2015-08-10 This guide covers the story of trigonometry It is a swift overview but it is complete in the context of the content discussed in beginning and advanced high school courses The purpose of these notes is to supplement and put into perspective the material of any course on the subject you may have taken or are currently taking These notes will be tough going for those encountering trigonometry for the very first time Hungarian Problem Book IV Robert Barrington Leigh,Chiang-Fung Andrew Liu,2011 Forty eight challenging problems from the oldest high school mathematics competition in the world This book is a continuation of Hungarian Problem Book III and takes the contest from 1944 through to 1963 This book is intended for beginners although the experienced student will find much here **Developing Math Talent** Susan G.
