that supports the ability to coordinate update and share design data with team members throughout the design construction and management phases of a building's life. A key component in managing the BIM process is to establish a company foundation for different types of projects by creating standard templates and custom family elements. Having this in place makes the process of any new project flow smoothly and efficiently. The objective of the Autodesk Revit 2020 BIM Management Template and Family Creation guide is to enable users who have worked with the software to expand their knowledge in setting up office standards with templates that include annotation styles, preset views, sheets and schedules, as well as creating custom system in place and component families. This guide contains practices that are specific to each discipline. Topics Covered: Create custom templates with annotation styles, title blocks and custom element types; Create schedules including material takeoff schedules with formulas; Create custom wall, roof and floor types as well as MEP system families; Set up a component family file with a parametric framework; Create family geometry; Create family types; Modify the visibility of components and incorporate additional family items such as controls, MEP connectors and nested components; Create specific families including in place families, profiles, annotations and parameters. This guide also contains discipline specific practices for families including doors, windows, railings, pipe fittings, light fixtures, gusset plates and built up columns. Prerequisites: Access to the 2020 version of the software to ensure compatibility with this guide. Future software updates that are released by Autodesk may include changes that are not reflected in this guide. Eastman, 2011-04-19 The BIM Handbook presents the technology and processes behind BIM and how architects, engineers, contractors and sub contractors, construction and facility owners, AECO can take advantage of the new technology and work process. Unlike CAD, BIM is a major paradigm shift in the documentation work processes and exchange of project information. It facilitates collaboration and further automation in both design and construction. AEC professionals need a handbook to guide them through the various BIM technologies and related processes. The collaborative nature of BIM requires professionals to view BIM from various industry perspectives and understand how BIM supports multiple project participants. The BIM Handbook reviews BIM processes and tools from multiple perspectives: the owner, architects and engineers, contractors, subcontractors and fabricators. **Delivering COBie Using Autodesk Revit (Perfect Bound)** E.
