This volume contains the proceedings of the 2nd IFToMM Workshop for Sustainable Development Goals I4SDG 2023 held in Bilbao Spain on 22-23 June 2023. The workshop papers are focused on those aspects of the theory, design and applications of Mechanism and Machine Science that are fundamental for moving towards sustainable development. The main topics of the workshop are sustainable energy systems, robotics and mechatronics, biomechanical and medical systems, education, linkages, gears, transmissions and actuators, engines and powertrains, tribology, transportation, machinery, service systems for sustainability, humanitarian engineering and socio-technical systems for sustainable and inclusive development. The contributions selected through a rigorous international peer review process highlight many exciting ideas that will drive new research directions and foster multidisciplinary collaboration between researchers from different backgrounds. **CERN.**

,2005 **Integrated Quantum Photonics** Shinichi Saito, Yong Zhang, Qin Wang, 2023-08-31 manipulating the inherent properties of quantum mechanics to develop a wide variety of novel technologies. Photons are nearly ideal carriers of quantum information, flying quantum bits due to their weak interaction with environments and relatively long coherence time. Owing to these outstanding characteristics, they are widely implemented not only in constructing quantum computing but also in developing quantum communication. Quantum technologies based on photons will potentially require integrated optical architecture for improved performance such as easy miniaturization and good scalability. Although plenty of experiments on quantum information have been performed with bulk optics, for those complicated schemes they will inevitably suffer from severe drawbacks such as poor stability, quite limited operation precision and rather bulky physical size etc. One promising candidate on conquering these weaknesses is to adopt miniaturized optical integrated devices. Until today, a large number of great researches on this aspect have been issued on different platforms. *Polymeric Nanocomposite*

Materials for Sensor Applications Jyotishkumar Parameswaranpillai, Sayan Ganguly, 2022-11-16 *Polymeric Nanocomposite Materials for Sensor Applications* covers all the important aspects of polymer composite based sensors from fundamentals to fabrication. Key chapters focus on the materials used for sensors and their characterization, properties, fabrication and classification. Various applications of polymeric sensors are also discussed in detail. This book is an essential reference resource not only for the materials scientist but also for researchers, academics, technologists and students working in the sensor technology industry. In modern society, sensors are used in electronics, food packaging, construction, automobile and aerospace applications. The advancement of smart technologies has increased their usage because of their affordability and reliability. Among the materials used for the fabrication of sensors, polymer composites are the most preferred because they are lightweight, versatile, low cost and easy to process.
