The main aim of this book is to provide a small collection of techniques stemmed from artificial intelligence as well as other complementary methodologies that are useful for the design and development of intelligent decision support systems. Application examples of how these intelligent decision support systems can be utilized to help tackle a variety of real world problems in different main areas, e.g., business management, manufacturing, transportation, and food industries and biomedicine are also presented. A total of twenty chapters which can be broadly divided into two parts, i.e.,
