Exploiting existing information in a company and creating new knowledge as a consequence has become critical in today's experience and understanding of industries. Even though Airbus established a pricey and custom-built ICT-based system for knowledge exchange and monetization, its utilization did not achieve the intended levels. The Airbus A380 is a triumph of construction as the world's biggest commercial airplane. The aircraft's operational debut was many years delayed, and the venture was several billion euros over expenditure.

The highly complicated management chart sought to keep various segments of the company pleased rather than concentrating on how to produce the airplane as effectively as possible. Failure to build a unified project team among the several design facilities in use. An overly aggressive timeline resulted in schedule pressure, causing crucial flaws to be overlooked early in the project's lifespan (Leoncini, 2017). Additionally, the problem was its inability to address concerns when they were initially recognized led to escalating expenses and considerably greater costs when the problems were ultimately addressed.

The failure to maintain proper control over the project's needs was the cause of the project's collapse. This happens when the expected possibility of success is more significant than an objective assessment of the circumstances would suggest. This is because people are driven and obliged to exert control over their surroundings. In theory, people are considered to have the desire to feel competent by directing the

Aviation Week & Space Technology, 2005 *Jane's International Defense Review*, 2006-07 **F & S Index United States Annual**, 2007 *Learning from a Drastic Failure* Isabel Dörfler, Oliver Baumann, 2014 How do organizations learn from a drastic failure We distinguish between ad hoc and systematic reactions and discuss their effectiveness for dealing with two basic challenges 1 identifying and solving the problems that caused the failure and 2 changing the organization accordingly We apply this conceptual perspective to illustrate the dynamics of learning from the drastic failure that occurred during the development of the Airbus A380 superjumbo Our findings echo extant observations that efforts to redesign organizational behavior in an ad hoc manner are often insufficient Instead the organizational system must provide a scaffolding that allows experiencing a critical event in a rich and systematic manner When seen from a dynamic perspective however we find that even imperfect ad hoc efforts may play a vital role By enforcing changes providing

stability and raising awareness they can act as a helpful prelude to more systematic problem solving and change Crash course Peter W.
