Manual of Alcoholic Fermentation and the Allied Industries Charles George Matthews, 1902 **Wine Science** Ronald S. Jackson, 2008-04-30 *Wine Science* Third Edition covers the three pillars of wine science: grape culture, wine production, and sensory evaluation. It takes readers on a scientific tour into the world of wine by detailing the latest discoveries in this exciting industry. From grape anatomy to wine and health, this book includes coverage of material not found in other enology or viticulture texts, including details on cork and oak, specialized wine-making procedures, and historical origins of procedures. Author Ronald Jackson uniquely breaks down sophisticated techniques, allowing the reader to easily understand wine science processes. This updated edition covers the chemistry of red wine color, origin of grape varieties, wine language, significance of color, and other biasing factors to wine perception, various meanings, and significance of wine oxidation. It includes significant additional coverage on brandy and ice wine production, as well as new illustrations and color photos. This book is recommended for grape growers, fermentation technologists, students of enology and viticulture, enologists, and viticulturalists. NEW to this edition: Extensive revision and additions on chemistry of red wine color, origin of grape varieties, wine language, significance of color, and other biasing factors to wine perception, various meanings, and significance of wine oxidation. Significant additional coverage on brandy and ice wine production. New illustrations and color photos.

Wine Chemistry and Biochemistry M. Victoria Moreno-Arribas, Carmen Polo, 2008-11-06 The aim of this book is to describe chemical and biochemical aspects of winemaking that are currently being researched. The authors have selected the very best experts for each of the areas. The first part of the book summarizes the most important aspects of winemaking technology and microbiology. The second, most extensive part, deals with the different groups of compounds, how these are modified during the various steps of the production process, and how they affect the wine quality, sensorial aspects, and physiological activity, etc. The third section describes undesirable alterations of wines, including those affecting quality and food safety. Finally, the treatment of data will be considered an aspect which has not yet been tackled in any other book on enology. In this chapter, the authors not only explain the tools available for analytical data processing but also indicate the most appropriate treatment to apply, depending on the information required, illustrating with examples throughout the chapter from enological literature.

Alcoholic Fermentation (Classic Reprint) Arthur Harden, 2015-08-09 Excerpt from Alcoholic Fermentation The problem of alcoholic fermentation of the origin and nature of that mysterious and apparently spontaneous change which converted the insipid juice of the grape into stimulating wine seems to have exerted a fascination over the minds of natural philosophers from the very earliest times No date can be assigned to the first observation of the phenomena of the process History finds man in the possession of alcoholic liquors and in the earliest chemical writings we find fermentation as a familiar natural process invoked to explain and illustrate the changes with which the science of those early days was concerned Throughout the period of alchemy fermentation plays an important part it is in fact scarcely too much to say that the language of the alchemists and many of their ideas were founded on the phenomena of fermentation The subtle change in properties permeating the whole mass of material the frothing of the fermenting liquid rendering evident the vigour of the action seemed to them the very emblems of the mysterious process by which the long sought for philosopher's stone was to convert the baser metals into gold As chemical science emerged from the mists of alchemy definite ideas about the nature of alcoholic fermentation and of putrefaction began to be formed Fermentation was distinguished from other chemical changes in which gases were evolved such as the action of acids on alkali carbonates Sylvius de le Boe 1659 the gas evolved was examined and termed gas vinorum and was distinguished from the alcohol with which it had at first been confused van Helmont 1648 afterwards it was found that like the gas from potashes it was soluble in water Wren 1664 The gaseous product of fermentation and putrefaction was identified by MacBride in 1764 with the fixed air of Black whilst Cavendish in 1766 showed that fixed air alone was evolved in alcoholic fermentation and that a mixture of this with inflammable air was

produced by putrefaction About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Microbiology of Ethanol Fermentation in Sugarcane Biofuels Sandra Regina Ceccato-Antonini,2022-10-27 This book discusses the microbiology of fermentation for the production of bioethanol from sugarcane Coverage includes how selected yeasts improve ethanol yield and productivity concerning recent advances at genomic transcriptomic and proteomic levels how microorganisms bacteria and yeasts interact with each other in fermentation vats and the application of microbiological monitoring methods with safety and precision Special attention is given to antimicrobial strategies used to decrease contamination The book is aimed at professionals working in the bioethanol industry as well as students and researchers studying biological and biotechnological aspects of applied matters such as industrial microbiology and industrial fermentations The English translation of this book from its Portuguese original manuscript was done with the help of artificial intelligence machine translation by the service provider DeepL.com A subsequent human revision of the content was done by the author Covers common microbiological monitoring techniques Reviews selected yeasts used in the bioethanol industry Examines the role of bacteria and native yeasts in ethanolic fermentation and methods to control their growth
