Example:

Suppose that a lot contains 100 items, 5 of which do not conform to requirements. If 10 items are selected at random without replacement, then the probability of finding one or fewer nonconforming items in the sample is

Where $N = 100$ $D = 5$ $n = 10$ $x = 0, 1$

$$\binom{a}{b} = \frac{a!}{b!(a-b)!}$$

$$P\{x \leq 1\} = P\{x = 0\} + P\{x = 1\}$$

E. Bassett, 2000 What is most valuable about this book is the very high quality of the model solutions It is a problem book for those teaching or learning a first course in mathematical statistics This one is outstandingly good and highly recommended Goeff Cohen University of Edinburgh Scotland The authors of this useful book take the view that the ability to solve practical problems is fundamental to an understanding of statistical techniques The book is designed to be read alongside a standard text I expect it is likely to be

most useful to the teacher or to the able student forced to work largely alone David Green This book not only provides a solution to each problem set but gives notes about that solution These notes should help students to understand the reasoning behind the techniques used so giving them confidence to deal with problems of a similar nature This book should prove a valuable addition to the library of students and teachers of statistics M J G Ansell Hatfield Polytechnic The book consists of a series of examples each followed by one or more alternative solutions and accompanying notes The solutions themselves are useful models The notes go one stage further and explain why particular techniques were chosen to solve each problem This approach may help to overcome the common difficulty of deciding which method to choose when answering examination questions The book is easy to read and suitable for individual study Richard J Field These notes provide fascinating insights into the process that experienced statisticians go through in order to solve a problem Students and maybe some instructors will benefit greatly from going through the solutions and the notes in this book Gudmund R Iversen Swarthmore College The approach of the authors is to improve a student's understanding of statistics and to help students appreciate which techniques might be appropriate for any problem Zentralblatt Math 2001 Using Statistical Methods for Water Quality Management Graham B. McBride, 2005-05-13 STATISTICS IN PRACTICE A practical exploration of alternative approaches to analyzing water related environmental issues Written by an experienced environmentalist and recognized expert in the field this text is designed to help water resource managers and scientists to formulate implement and interpret more effective methods of water quality management After presenting the basic foundation for using statistical methods in water resource management including the use of appropriate hypothesis test procedures and some rapid calculation procedures the author offers a range of practical problems and solutions on environmental topics that often arise but are not generally covered These include Formulating water quality standards Determining compliance with standards MPNs and microbiology Water related human health risk modeling Trends impacts concordance and detection limits In order to promote awareness of alternative approaches to analyzing data both frequentist and Bayesian statistical methods are contrasted in terms of their applicability to various environmental issues Each chapter ends with a number of set problems for which full answers are provided The book also encourages discussion between technical staff and management before embarking on statistical studies **Exploring Monte Carlo Methods** William L. Models for Discrete Data Daniel Zelterman, 1999-01-21 Discrete or count data arise in experiments where the outcome variables are the numbers of individuals classified into unique non overlapping categories This revised edition describes the statistical models used in the analysis and summary of such data and provides a sound introduction to the subject for graduate students and practitioners needing a review of the methodology With many numerical examples throughout it includes topics not covered in depth elsewhere such as the negative multinomial distribution the many forms of the hypergeometric distribution and coordinate free models A detailed treatment of sample size estimation and power are given in terms of both exact inference and asymptotic non central chi squared methods A new section covering Poisson regression has also been included An important feature of this book missing elsewhere is the integration of the software into the text Many more exercises are provided including 84% more applied exercises than in the previous edition helping consolidate the reader's understanding of all subjects covered and making the book highly suitable for use in a classroom setting Several new datasets mostly from the health and medical sector are discussed including previously unpublished data from a study of Tourette's Syndrome in children
