Problems in Section 3.9.

1. Find the greatest common divisor of the following polynomials over F , the field of rational numbers.

a) $x^3 - 6x^2 + x + 4$ and $x^5 - 6x + 1$.

Solution. Observe that

$$\begin{aligned}x^5 - 6x + 1 &= (x^2 + 6x + 35)(x^3 - 6x^2 + x + 4) + 200x^2 - 65x - 139, \\x^3 - 6x^2 + x + 4 &= \left(\frac{x}{200} - \frac{227}{8000}\right)(200x^2 - 65x - 139) + \left(-\frac{239}{1600}x + \frac{447}{8000}\right), \\200x^2 - 65x - 139 &= \left(-\frac{320000}{239}x - \frac{3752000}{57121}\right)\left(-\frac{239}{1600}x + \frac{447}{8000}\right) - \frac{7730176}{57121}, \\-\frac{239}{1600}x + \frac{447}{8000} &= \left(\frac{13651919}{12368281600}x - \frac{25533087}{61841408000}\right)\left(-\frac{7730176}{57121}\right) + 0\end{aligned}$$

Thus the greatest common divisor of $x^3 - 6x^2 + x + 4$ and $x^5 - 6x + 1$ is 1. □

b) $x^2 + 1$ and $x^6 + x^3 + x + 1$.

Solution. Note that $x^6 + x^3 + x + 1 = (x^4 - x^2 + x + 1)(x^2 + 1)$, so that their greatest common divisor is $x^2 + 1$. □

2. Prove that

a) $x^2 + x + 1$ is irreducible over F , the field of integers mod 2.

Proof. Substituting $x = 0$ and $x = 1$ both to $x^2 + x + 1$ yields 1 mod 2, so that $x^2 + x + 1$ is irreducible over F . □

b) $x^2 + 1$ is irreducible over the integers mod 7.

Basic Abstract Algebra: Exercises And Solutions Mohammed Hichem Mortad, 2022-02-10 This book is mainly intended for first year University students who undertake a basic abstract algebra course as well as instructors It contains the basic notions of abstract algebra through solved exercises as well as a True or False section in each chapter Each chapter also contains an essential background section which makes the book easier to use **Algebra through practice : a collection of problems in algebra with solutions. 6. Rings, fields and modules** T. S. Blyth, Thomas Scott Blyth, 1985 Problem solving is an art that is central to understanding and ability in mathematics With this series of books the authors have provided a selection of problems with complete solutions and test papers designed to be used with or instead of standard textbooks on algebra For the convenience of the reader a key explaining how the present books may be used in conjunction with some of the major textbooks is included Each book of problems is divided into chapters that begin with some notes on notation and prerequisites The majority of the material is aimed at the student of average ability but there are some more challenging problems By working through the books the student will gain a deeper understanding of the fundamental concepts involved and practice in the formulation and so solution of other algebraic problems Later books in the series cover material at a more advanced level than the earlier titles although each is within its own limits self contained Selected Exercises in Algebra Rocco Chirivì, Ilaria Del Corso, Roberto Dvornicich, 2020-01-29 This book the first of two volumes contains over 250 selected exercises in Algebra which have featured as exam questions for the Arithmetic course taught by the authors at the University of Pisa Each exercise is presented together with one or more solutions carefully written with consistent language and notation A distinguishing feature of this book is the fact that each exercise is unique and requires some creative thinking in order to be solved The themes covered in this volume are mathematical induction combinatorics modular arithmetic Abelian groups commutative rings polynomials field extensions finite fields The book includes a detailed section recalling relevant theory which can be used as a reference for study and revision A list of preliminary exercises introduces the main techniques to be applied in solving the proposed exam questions This volume is aimed at first year students in Mathematics and Computer Science *The William Lowell Putnam Mathematical Competition Problems and Solutions* Andrew M. Gleason, 1980 Back by popular demand the MAA is pleased to reissue this outstanding collection of problems and solutions from the Putnam Competitions covering the years 1938 1964 Problemists the world over including all past and future Putnam Competitors will revel in mastering the difficulties posed by this collection of problems from the first 25 William Lowell Putnam Competitions Advanced Calculus Patrick Fitzpatrick, 2009 Advanced Calculus is intended as a text for courses that furnish the backbone of the student s undergraduate education in mathematical analysis The goal is to rigorously present the fundamental concepts within the context of illuminating examples and stimulating exercises This book is self contained and starts with the creation of basic tools using the completeness axiom The continuity differentiability

integrability and power series representation properties of functions of a single variable are established The next few chapters describe the topological and metric properties of Euclidean space These are the basis of a rigorous treatment of differential calculus including the Implicit Function Theorem and Lagrange Multipliers for mappings between Euclidean spaces and integration for functions of several real variables Special attention has been paid to the motivation for proofs Selected topics such as the Picard Existence Theorem for differential equations have been included in such a way that selections may be made while preserving a fluid presentation of the essential material Supplemented with numerous exercises Advanced Calculus is a perfect book for undergraduate students of analysis *Problem-Solving Through Problems* Loren C. Larson, 2012-12-06 This is a practical anthology of some of the best elementary problems in different branches of mathematics Arranged by subject the problems highlight the most common problem solving techniques encountered in undergraduate mathematics This book teaches the important principles and broad strategies for coping with the experience of solving problems It has been found very helpful for students preparing for the Putnam exam **Topics in Algebra** I. N.
