

IEEE 829 Documentation

Over the years a number of types of document have been invented to allow for the control of testing. They apply to software testing of all kinds from component testing through to release testing. Every organisation develops these documents themselves and gives them different names, and in some cases confuses their purpose. To provide a common set of standardised documents the IEEE developed the 829 Standard for Software Test Documentation for any type of software testing, including User Acceptance Testing.

This White Paper outlines each of the types of document in this standard and describes how they work together.

The Types of Document

There are eight document types in the IEEE 829 standard, which can be used in three distinct phases of software testing:

1. Preparation Of Tests

- Test Plan: Plan how the testing will proceed.
- Test Design Specification: Decide what needs to be tested.
- Test Case Specification: Create the tests to be run.
- Test Procedure: Describe how the tests are run.
- Test Item Transmittal Report: Specify the items released for testing.

2. Running The Tests

- Test Log: Record the details of tests in time order.
- Test Incident Report: Record details of events that need to be investigated.

3. Completion of Testing

- Test Summary Report: Summarise and evaluate tests.

Documentation For Preparation Of Tests

The preparation for testing is the most important part of any software testing project and easily accounts for most of the paper work. The purpose this stage is to prepare an effective and efficient set of tests, and create the environment for them to run in.

IEEE 829 - Test Plan

The Test Plan is the pivotal document around which all the software testing projects revolve. It describes:

- what has to be done,
- to what quality standard,
