Cities On A Finite Planet Towards Transformative Responses To Climate Change:

Cities on a Finite Planet Sheridan Bartlett, David Satterthwaite, 2016-04-14 Cities on a Finite Planet Transformative responses to climate change shows how cities can combine high quality living conditions resilience to climate change disaster risk reduction and contributions to mitigation low carbon development It also covers the current and potential contribution of cities to avoiding dangerous climate change and is the first book with an in depth coverage of how cities and their governments citizens and civil society organizations can combine these different agendas based on careful city level analyses The foundation for the book is detailed city case studies on Bangalore Bangkok Dar es Salaam Durban London Manizales Mexico City New York and Rosario Each of these was led by authors who contributed to the IPCC s Fifth Assessment and are thus acknowledged as among the world s top specialists in this field This book highlights where there is innovation and progress in cities and how this was achieved Also where there is little progress and no action and where there is no capacity to act It also assesses the extent to which cities can address the Sustainable Development Goals within commitments to also dramatically reduce greenhouse gas emissions In this it highlights how much progress on these different agendas depends on local governments and their capacities to work with their low income populations

Adapting cities for transformative climate resilience: Lessons from the field Amrita G. Daniere, Diane Archer, 2023-06-29 **Transformative Climate Governance** Katharina Hölscher, Niki Frantzeskaki, 2020-08-26 How to progress climate science to be policy relevant and actionable This book presents a novel framework to give a positive vision and structuring approach to guide research and practice on transformative climate governance to shift the narrative from apathy and stalemate to action and transformation Our vision contrasts existing climate governance and associated lock ins that signify the institutional resistance to change To effectively address climate change climate governance itself needs to be transformed to foster sustainability transitions under climate change The book brings together a collection of case studies to investigate how capacities for transformative climate governance are developing at multiple scales and how they can be strengthened vis vis existing governance regimes Specifically it sheds light on the following questions What are key overarching conditions actors and activities that facilitate governance for transformation under climate change Given persistent climate governance lock ins what needs to happen in research and policy to build up the capacities that transform climate governance and ensure effective climate action

Climate Change in Cities Sara Hughes, Eric K. Chu, Susan G. Mason, 2017-09-27 This book presents pioneering work on a range of innovative practices experiments and ideas that are becoming an integral part of urban climate change governance in the 21st century Theoretically the book builds on nearly two decades of scholarships identifying the emergence of new urban actors spaces and political dynamics in response to climate change priorities However it further articulates and applies the concepts associated with urban climate change governance by bridging formerly disparate disciplines and approaches Empirically the chapters investigate new multi level urban governance arrangements from around the world and leverage the

insights they provide for both theory and practice Cities both as political and material entities are increasingly playing a critical role in shaping the trajectory and impacts of climate change action However their policy planning and governance responses to climate change are fraught with tension and contradictions While on one hand local actors play a central role in designing institutions infrastructures and behaviors that drive decarbonization and adaptation to changing climatic conditions their options and incentives are inextricably enmeshed within broader political and economic processes Resolving these tensions and contradictions is likely to require innovative and multi level approaches to governing climate change in the city new interactions new political actors new ways of coordinating and mobilizing resources and new frameworks and technical capacities for decision making We focus explicitly on those innovations that produce new relationships between levels of government between government and citizens and among governments the private sector and transnational and civil society actors A more comprehensive understanding is needed of the innovative approaches being used to navigate the complex networks and relationships that constitute contemporary multi level urban climate change governance Debra Roberts Co Chair Working Group II IPCC 6th Assessment Report AR6 and Acting Head Sustainable and Resilient City Initiatives Durban South Africa Climate Change in Cities offers a refreshingly frank view of how complex cities and city processes really are Christopher Gore Associate Professor and Chair Department of Politics and Public Administration Ryerson University Canada This book is a rare and welcome contribution engaging critically with questions about cities as central actors in multilevel climate governance but it does so recognizing that there are lessons from cities in both the Global North and South Harriet Bulkeley Professor of Geography Durham University United Kingdom This timely collection provides new insights into how cities can put their rhetoric into action on the ground and explores just how this promise can be realised in cities across the world from California to Canada India to Indonesia
