

The ethics behind human cloning

Katherine Johnson

11 Legal 2020

Cloning is the process of creating an exact copy of something. Often in genetics, cloning refers to the process of making an identical copy of the DNA of an organism. Human cloning is the use of an organism that goes through a genetic replicating process, using DNA, embryos or stem cell tissue. As a result, the organism has the same exact features, DNA and characteristics. Human cloning would mean recreating the embryo, DNA or stem cell that is being cloned exactly. This is where the role of ethics comes into play.

If a cloned organism were implanted into a womb, as was done in the case of Dolly the sheep, it could possibly go on to full development and birth. Because of this potential, some would argue that the organism produced in human therapeutic cloning experiments is the equivalent of any ordinary human embryo and merits the same degree of respect and protection. The use of human cloning for medical purposes, e.g. cloning a person to harvest for organs, poses significant questions regarding how ethical that could possibly be? We are creating another exact copy of a person to use it as a bank of organs for another, in a world where we are vastly over populated. Using another person's DNA to clone would also create question of who does that clone belong to? The lab? The person who it's been cloned from? The government?.
