Handbook of Suicide Prevention Updesh Kumar, 2025-04-14

The Handbook of Suicide Prevention covers a broad range of topics related to suicidal behaviour, including its underlying causes, risk factors, prevention strategies, and therapeutic approaches. With contributions by renowned experts in the field, the volume brings forth the latest research and clinical insights into suicidal behaviour. It highlights evidence-based practices effective in reducing suicide risk. It provides a comprehensive overview of the multidimensional perspectives, including biological, psychological, and social factors contributing to suicidal ideation and behaviour. The book provides a nuanced and extensive understanding of how suicide risk and protective factors are shaped by social, cultural, and political contexts across the lifespan. The last section of the volume highlights the need for a multifaceted approach to suicide prevention by leveraging the latest technologies and therapeutic modalities while also addressing the social and cultural factors that contribute to suicide risk. Suicidal behaviour remains an intriguing phenomenon that demands addressing, being among the leading causes of death worldwide. The handbook is a compilation of essential resources that offers a multitude of theoretical and compassionate approaches to understanding and addressing this complex phenomenon. Its practical guidance and evidence-based recommendations make it an essential reference for anyone working in suicide prevention, mental health, and social work.

Sex and Gender Differences in Alzheimer's Disease Maria Teresa Ferretti, Annemarie Schumacher Dimech, Antonella Santucci, Chadha, 2021-07-23

Sex and Gender Differences in Alzheimer's Disease: The Women's Brain Project offers for the first time a critical overview of the evidence documenting sex and gender differences in Alzheimer's disease, neurobiology, biomarkers, clinical presentation, treatment, clinical trials, and their outcomes, and socioeconomic impact on both patients and caregivers. This knowledge is crucial for clinical development, digital health solutions, as well as social and psychological support to Alzheimer's disease families in the frame of a precision medicine approach to Alzheimer's disease. This book brings together up-to-date findings from a variety of experts covering basic neuroscience, epidemiology, diagnosis, treatment, clinical trials, development, socioeconomic factors, and psychosocial support. Alzheimer's disease, the most common form of dementia, remains an unmet medical need for the planet. Wide interpersonal variability in disease onset, presentation, and biomarker profile make Alzheimer's a clinical challenge to neuroscientists, clinicians, and drug developers alike, resulting in huge management costs for health systems and society. Not only do women represent the majority of Alzheimer's disease patients, but they also represent two-thirds of caregivers. Understanding sex and gender differences in Alzheimer's disease will lead to novel insights into disease mechanisms and will be crucial for personalized disease management strategies and solutions involving both the patient and their family.

Endorsements/Reviews: There is a clear sex

and gender gap in outcomes for brain health disorders like Alzheimer's disease with strikingly negative outcomes for women. This understanding calls for a more systematic way of approaching this issue of inequality. This book effectively highlights and frames inequalities in all areas across the translational spectrum from bench to bedside and from boardroom to policy and economics. Closing the Brain Health Gap will help economies create recovery and prepare our systems for future global shocks. Harris A Eyre MBBS PhD co-lead Neuroscience inspired Policy Initiative OECD and PRODEO Institute. Instructor in Brain Health Diplomacy Global Brain Health Institute UCSF and TCD. Sex and Gender Differences in Alzheimer's disease is the most important title to emerge on Alzheimer's disease in recent years. This comprehensive multidisciplinary book is a must-read for anyone with a serious interest in dementia prevention, diagnosis, treatment, care, cure, and research. Precision medicine is the future of healthcare, and this book represents an incredible and necessary resource to guide practice, policy, and research in light of the fact that Alzheimer's disease disproportionately affects women. The combination of contributions from the most eminent experts and the most up-to-date research makes this an invaluable resource for clinicians, care providers, academics, researchers, and policy makers. Given the complex nature of dementia and the multiple factors that influence risk and disease trajectory, the scope of the book is both impressive and important, covering sex differences in neurobiological processes, sex and gender differences in clinical aspects, and gender differences linked to socioeconomic factors relevant to Alzheimer's disease. If you work in Alzheimer's disease or indeed other dementias, then Sex and Gender Differences in Alzheimer's disease is a must-have for your bookshelf. Sabina Brennan PhD C Psychol PsSI National representative for Ireland on Alzheimer Disease International's Medical and Scientific Advisory Panel.
