Fundamentals Of Object Tracking

Xue-Bo Jin, Yuan Gao

Fundamentals Of Object Tracking:

Fundamentals of Object Tracking, 2011 Kalman filter particle filter IMM PDA ITS random sets The number of useful object tracking methods is exploding But how are they related How do they help to track everything from aircraft missiles and extra terrestrial objects to people and lymphocyte cells How can they be adapted to novel applications *Fundamentals of Object Tracking* tells you how Starting with the generic object tracking problem it outlines the generic Bayesian solution It then shows systematically how to formulate the major tracking problems maneuvering multi object clutter out of sequence sensors within this Bayesian framework and how to derive the standard tracking solutions This structured approach makes very complex object tracking algorithms accessible to the growing number of users working on real world tracking problems and supports them in designing their own tracking filters under their unique application constraints The book concludes with a chapter on issues critical to the successful implementation of tracking algorithms such as track initialization and merging

Fundamentals of Object Tracking, 2011-07-28 Introduces object tracking algorithms from a unified recursive Bayesian perspective along with performance bounds and illustrative examples [Analytic Combinatorics for Multiple Object Tracking](#) Roy Streit, Robert Blair Angle, Murat Efe, 2020-11-26 The book shows that the analytic combinatorics AC method encodes the combinatorial problems of multiple object tracking without information loss into the derivatives of a generating function GF The book lays out an easy to follow path from theory to practice and includes salient AC application examples Since GFs are not widely utilized amongst the tracking community the book takes the reader from the basics of the subject to applications of theory starting from the simplest problem of single object tracking and advancing chapter by chapter to more challenging multi object tracking problems Many established tracking filters e g Bayes Markov PDA JPDA IPDA JIPDA CPHD PHD multi Bernoulli MBM LMBM and MHT are derived in this manner with simplicity economy and considerable clarity The AC method gives significant and fresh insights into the modeling assumptions of these filters and thereby also shows the potential utility of various approximation methods that are well established techniques in applied mathematics and physics but are new to tracking These unexplored possibilities are reviewed in the final chapter of the book
