11 **Big Data: Concepts, Methodologies, Tools, and Applications** Management Association, Information Resources, 2016-04-20 The digital age has presented an exponential growth in the amount of data available to individuals looking to draw conclusions based on given or collected information across industries Challenges associated with the analysis security sharing storage and visualization of large and complex data sets continue to plague data scientists and analysts alike as traditional data processing applications struggle to adequately manage big data Big Data Concepts Methodologies Tools and Applications is a multi volume compendium of research based perspectives and solutions within the realm of large scale and complex data sets Taking a multidisciplinary approach this publication presents exhaustive coverage of crucial topics in the field of big data including diverse applications storage solutions analysis techniques and methods for searching and transferring large data sets in addition to security issues Emphasizing essential research in the field of data science this publication is an ideal reference source for data analysts IT professionals researchers and academics *Stream Data Processing: A Quality of Service Perspective* Sharma Chakravarthy, Qingchun Jiang, 2009-04-09 In recent years a new class of applications has come to the forefront primarily due to the advancement in our ability to collect data from multitudes of devices and process them efficiently These include homeland security applications sensor pervasive computing applications various kinds of monitoring applications and even traditional applications belonging to financial computer network management and telecommunication domains These applications need to process data continuously and as long as data is available from one or more sources The sequence of data items continuously generated by sources is termed a data stream Because of the possible never ending nature of a data stream the amount of data to be processed is likely to be unbounded In addition timely detection of interesting changes or patterns or aggregations over incoming data is critical for many of these applications Furthermore the data arrival rates may fluctuate over a period of time and may be bursty at times For most of these applications Quality of Service or QoS requirements such as response time memory usage and throughput are extremely

important These application requirements make it infeasible to simply load the incoming data streams into a persistent store and process them effectively using currently available database management techniques Blockchain and Web 3.0

Massimo Ragnedda, Giuseppe Destefanis, 2019-07-09 Blockchain is no longer just about bitcoin or cryptocurrencies in general. Instead, it can be seen as a disruptive revolutionary technology which will have major impacts on multiple aspects of our lives. The revolutionary power of such technology compares with the revolution sparked by the World Wide Web and the Internet in general. Just as the Internet is a means of sharing information, so blockchain technologies can be seen as a way to introduce the next level sharing value. Blockchain and Web 3.0 fills the gap in our understanding of blockchain technologies by hosting a discussion of the new technologies in a variety of disciplinary settings. Indeed, this volume explains how such technologies are disruptive and comparatively examines the social, economic, technological, and legal consequences of these disruptions. Such a comparative perspective has previously been underemphasized in the debate about blockchain, which has subsequently led to weaknesses in our understanding of decentralized technologies. Underlining the risks and opportunities offered by the advent of blockchain technologies and the rise of Web 3.0, this book will appeal to researchers and academics interested in fields such as sociology and social policy, cyberculture, new media, and privacy and data protection. *The SAGE Handbook of Social Media Research Methods*
