The Consciousness Instinct Michael S. Gazzaniga, 2018-04-03 How do neurons turn into minds How does physical stuff atoms molecules chemicals and cells create the vivid and various worlds inside our heads The problem of consciousness has gnawed at us for millennia In the last century there have been massive breakthroughs that have rewritten the science of the brain and yet the puzzles faced by the ancient Greeks are still present This book puts the latest research in conversation with the history of human thinking about the mind giving a big picture view of what science has revealed about consciousness The idea of the brain as a machine first proposed centuries ago has led to assumptions about the relationship between mind and brain that dog scientists and philosophers to this day The author asserts that this model has it backward brains make machines but they cannot be reduced to one New research suggests the brain is actually a confederation of independent modules working together Understanding how consciousness could emanate from such an organization will help define the future of brain science and artificial intelligence and close the gap between brain and mind

The History of Neuroscience in Autobiography Larry R. Squire, 2011-09-09 The seventh volume of The History of Neuroscience in Autobiography is a collection of autobiographical essays by distinguished senior neuroscientists in which they recount the events that shaped their lives and identify the mentors and colleagues who inspired them The narratives provides a human dimension to the world of scientific research

California. Court of Appeal (2nd Appellate District). Records and Briefs California (State)., The Mind's Past Michael S. Gazzaniga, 1998-05-07 Why does the human brain insist on interpreting the world and constructing a narrative In this ground breaking work Michael S Gazzaniga one of the world's foremost cognitive neuroscientists shows how our mind and brain accomplish the amazing feat of constructing our past a process clearly fraught with errors of perception memory and judgment By showing that the specific systems built into our brain do their work automatically and largely outside of our conscious awareness Gazzaniga calls into question our everyday notions of self and reality The implications of his ideas reach deeply into the nature of perception and memory the profundity of human instinct and the ways we construct who we are and how we fit into the world around us Over the past

thirty years the mind sciences have developed a picture not only of how our brains are built but also of what they were built to do. The emerging picture is wonderfully clear and pointed underlining William James's notion that humans have far more instincts than other animals. Every baby is born with circuits that compute information enabling it to function in the physical world. Even what helps us to establish our understanding of social relations may have grown out of perceptual laws delivered to an infant's brain. Indeed the ability to transmit culture an act that is only part of the human repertoire may stem from our many automatic and unique perceptual motor processes that give rise to mental capacities such as belief and culture. Gazzaniga explains how the mind interprets data the brain has already processed making us the last to know. He shows how what we see is frequently an illusion and not at all what our brain is perceiving. False memories become a part of our experience. Autobiography is fiction. In exploring how the brain enables the mind, Gazzaniga points us toward one of the greatest mysteries of human evolution: how we become who we are.

The Integrated Mind Michael S. Gazzaniga, Joseph E. LeDoux, 2013-06-29 In this book we are trying to illuminate the persistent and nagging questions of how mind, life and the essence of being relate to brain mechanisms. We do that not because we have a commitment to bear witness to the boring issue of reductionism but because we want to know more about what it's all about. How indeed does the brain work? How does it allow us to love, hate, see, cry, suffer and ultimately understand Kepler's laws? We try to uncover clues to these staggering questions by considering the results of our studies on the bisected brain. Several years back one of us wrote a book with that title and the approach was to describe how brain and behavior are affected when one takes the brain apart. In the present book we are ready to put it back together and go beyond for we feel that split brain studies are now at the point of contributing to an understanding of the workings of the integrated mind. We are grateful to Dr. Donald Wilson of the Dartmouth Medical School for allowing us to test his patients. We would also like to thank our past and present colleagues including Richard Nakamura, Gail Risse, Pamela Greenwood, Andy Francis, Andrea Elberger, Nick Brecha, Lynn Bengston and Sally Springer who have been involved in various facets of the experimental studies on the bisected brain described in this book.

Who's in Charge? Michael S. Gazzaniga, 2011-11-15 Big questions are Gazzaniga's stock in trade. New York Times: Gazzaniga is one of the most brilliant experimental neuroscientists in the world. Tom Wolfe: Gazzaniga stands as a giant among neuroscientists for both the quality of his research and his ability to communicate it to a general public with infectious enthusiasm. Robert Bazell, Chief Science Correspondent, NBC News: The author of *Human*, Michael S. Gazzaniga has been called the father of cognitive neuroscience. In his remarkable book *Who's in Charge* he makes a powerful and provocative argument that counters the common wisdom that our lives are wholly determined by physical processes we cannot control. His well-reasoned case against the idea that we live in a determined world is fascinating and liberating, solidifying his place among the likes of Oliver Sacks, Antonio Damasio, V.S. Ramachandran and other bestselling science authors exploring the mysteries of the human brain.
