Alhasan, Nadiyah Alahmadi, 2021-01-26 This book provides notes for basic laboratory experiments in qualitative analysis of cations The book introduces readers to basic methods and laboratory safety Subsequent chapters cover six groups of cations Each chapter explains important details that are required to understand how a particular analytical method works for detecting cations in samples starting from sedimentation and ending with the identification Key Features Simple reader friendly format introductory notes and summary Covers several groups of metals Appendix for handy reference with tables and references This is a useful textbook for early chemistry students and teachers as it equips the readers with sufficient information required to analyze chemical samples and deduce the presence of specific cations as part of laboratory coursework

Waking the Power Within Thermodynamics and the Human Battery Professor Ibrahim El-Noshokaty, The sci fi film The Matrix introduces a fascinating premise where humans function as energy sources for an advanced machine society In this fictional world human bodies are maintained in a state of suspended animation while their minds exist in a virtual reality allowing machines to extract their bioelectric thermal and kinetic energy This article investigates the scientific feasibility of utilizing humans as a power source by applying thermodynamic principles According to the first law of thermodynamics the energy required to sustain human life would result in a net energy loss for the machines The second law indicates that the system's entropy would rise rendering it an inefficient energy strategy Furthermore the energy output of a human body even if fully utilized would be inadequate to meet the machines energy demands More efficient alternatives for the machines would include other biological power sources and energy harvesting techniques such as solar or nuclear power The article concludes that while the concept of human batteries serves as an engaging storytelling element it is not a scientifically viable solution for the machines energy requirements The machines choice to preserve human life may be motivated by other factors such as leveraging their collective cognitive abilities for computational purposes or adhering to an ethical code that prohibits the complete annihilation of humanity This investigation aims to fill the gap by providing a detailed thermodynamic analysis of the energy expenditure required to sustain human life in a suspended animation state and the inefficiency of this system as an energy source for machines a facet previously unexplored By elucidating the thermodynamic constraints of human based energy sources this study not only challenges a popular sci fi narrative but also

enriches our understanding of bioenergetic processes and their implications for future energy harvesting technologies

Evolving Nature of Objectivity in the History of Science and its Implications for Science Education Mansoor Niaz, 2017-10-26 This book explores the evolving nature of objectivity in the history of science and its implications for science education. It is generally considered that objectivity, certainty, truth, universality, the scientific method, and the accumulation of experimental data characterize both science and science education. Such universal values associated with science may be challenged while studying controversies in their original historical context. The scientific enterprise is not characterized by objectivity or the scientific method but rather controversies, alternative interpretations of data, ambiguity, and uncertainty. Although objectivity is not synonymous with truth or certainty, it has eclipsed other epistemic virtues, and to be objective is often used as a synonym for scientific. Recent scholarship in history and philosophy of science has shown that it is not the experimental data, Baconian orgy of quantification, but rather the diversity, plurality in a scientific discipline that contributes toward understanding objectivity. History of science shows that objectivity and subjectivity can be considered as the two poles of a continuum, and this dualism leads to a conflict in understanding the evolving nature of objectivity. The history of objectivity is nothing less than the history of science itself, and the evolving and varying forms of objectivity does not mean that one replaced the other in a sequence but rather each form supplements the others. This book is remarkable for its insistence that the philosophy of science, and in particular that discipline's analysis of objectivity as the supposed hallmark of the scientific method, is of direct value to teachers of science. Meticulously yet in a most readable way, Mansoor Niaz looks at the way objectivity has been dealt with over the years in influential educational journals and in textbooks. It's fascinating how certain perspectives fade while basic questions show no sign of going away. There are few books that take both philosophy and education seriously; this one does. Roald Hoffmann, Cornell University chemist, writer, and Nobel Laureate in Chemistry.

Physico-chemical Aspects of Textile Coloration Stephen M. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products. As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material. The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres. Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye. The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing. Dyeing as an area of study as well as the terminology employed in dyeing technology and science. Contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level. Fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption. Detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres. Polyester polyamide wool polyacrylonitrile and silk fibres. Non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium. The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work. The book is essential reading for students teachers researchers and professionals involved in textile coloration.
