therapists and athletic trainers **The Diabetic Foot** Aristidis Veves, John M. Giurini, Marc L. Schermerhorn, 2024-05-30

The fifth addition of this classic text that focuses on the diabetic foot continues the tradition of the previous four editions. More specifically, it includes contributions from a distinguished panel of clinicians and researchers who have either participated in previous editions or are new who provide up-to-date information on the pathophysiology and management of diabetic foot ulceration. As with the previous editions, it is divided into three sections: the first part focuses on clinical features and diagnosis, the second on pathophysiology, and the third on the management of diabetic foot problems. The main emphasis of the clinical part is on the multidisciplinary approach that has been mainly developed by the world-renowned Joslin Beth Israel Deaconess Foot Center, which pioneered the management of diabetic lower extremity problems. Also like previous editions, the author panel includes diabetologists, podiatrists, vascular surgeons, infectious disease specialists, orthotists, plastic and orthopedic surgeons, the majority of whom work at the Joslin Beth Israel Deaconess Foot Center. In addition, the fifth edition not only describes the state-of-the-art current methods in clinical practice but also includes a thorough update of all research progress during the last five years. This updated edition of this timely text will be of significant value to all physicians and researchers with interest in a comprehensive understanding of the diabetic foot. *The Third International Conference on the Development of Biomedical Engineering in Vietnam* Vo Van Toi, Truong Quang Dang Khoa, 2010-04-03

Vietnam is a rapidly developing, socially dynamic country where interest in biomedical engineering activities has grown considerably in recent years. The leadership of the Vietnamese government and of research and educational institutions are well aware of the importance of this field for the development of the country and have instituted policies to promote its development. The political, economic, and social environment within the country offers unique opportunities for the international community, and this conference was intended to provide a vehicle for the sharing of experiences, development of support and collaboration networks for research and exchange of ideas on how to improve the educational and entrepreneurial environment to better address the urgent needs of Vietnam. In January 2004, under the sponsorship of the U.S. National Science Foundation, a U.S. delegation that consisted of Biomedical Engineering professors from different universities in the United States visited several universities and research institutions in Vietnam to assess the state of development of this field. This delegation proposed a five-year plan that was enthusiastically embraced by the international scientific communities to actively develop collaborations with Vietnam. Within this framework, in July 2005, the First International Conference on the Development of Biomedical Engineering in Vietnam was held in Ho Chi Minh City. From that conference, a Consortium of Vietnam International Universities was created to advise and assist the development of Biomedical Engineering in Vietnamese universities.
