to bodily resurrection to any form of posthumous survival Then essayists turn to internal inconsistencies between traditional theological conceptions of an afterlife heaven hell karmic rebirth and widely held ethical principles central to the belief systems supporting those notions In the final section authors offer critical evaluations of the main types of evidence for an afterlife Fully interdisciplinary The Myth of an Afterlife The Case against Life after Death brings together a variety of fields of research to make that case including cognitive neuroscience philosophy of mind personal identity philosophy of religion moral philosophy psychical research and anomalistic psychology As the definitive casebook of arguments against life after death this collection is required reading for any instructor researcher and student of philosophy religious studies or theology It is sure to raise provocative issues new to readers regardless of background from those who believe fervently in the reality of an afterlife to those who do not or are undecided on the matter
