Critical Care Nephrology Claudio Ronco, Rinaldo Bellomo, John A. Kellum, 2009-01-01 This 2nd edition of Critical care nephrology continues to provide comprehensive coverage of the latest advances in critical care procedures for the adult or pediatric patient with renal diseases or disorders. It presents a common language and standardized guidelines to help multi-disciplinary physicians caring for the critically ill communicate more effectively. **BOOK JACKET** *Acute Kidney Injury* Claudio Ronco, Rinaldo Bellomo, John A. Kellum, 2007-01-01 Acute kidney injury is defined as an abrupt change in serum creatinine and/or urine output, and a majority of patients admitted to the ICU have some evidence of the disorder. Unfortunately, treatment for this complex syndrome is as yet lacking and understanding is limited. An interdisciplinary panel of experts has contributed to this volume, illuminating some of the fundamental and complex aspects of the disorder, ranging from pathophysiology to treatment, from emerging biomarkers to genetic polymorphisms. Other contributions focus on immunological issues or the many complications of acute kidney injury and co-morbid conditions encountered, covering the fundamentals as well as the latest developments. Moreover, important technical aspects of extracorporeal therapies, including vascular access, anticoagulation, or fluid composition, are introduced, and different approaches to renal support, from intermittent dialysis to continuous therapies and hybrid techniques, are discussed. A description of advanced extracorporeal techniques of organ support and their role in the management of sepsis and acute kidney injury in the context of an overall strategy of multi-organ failure management concludes the discussions. This volume not only provides a practical and up-to-date summary of current knowledge and technology but also imparts a fundamental understanding of the pathogenesis and likely future developments in this field. It also serves to challenge and re-examine the fundamental underlying assumptions we hold regarding critical illness in general and acute kidney injury in particular. *Continuous Renal Replacement Therapy* John A. Kellum, Rinaldo Bellomo, Claudio Ronco, 2016-02-16 Continuous Renal Replacement Therapy provides concise evidence-based bedside guidance for the management of critically ill patients with acute renal failure, offering quick reference answers to clinicians' questions about treatments and situations encountered in daily practice. Mathematical Modelling of Haemodialysis Leszek Pstrasz, Jacek Waniewski, 2019-07-03 Beginning with an introduction to kidney function, renal replacement therapies, and an overview of clinical problems associated with haemodialysis, this book explores the principles of the short-term baroreflex regulation of the cardiovascular system and the mechanisms of water and solute transport across the human body from a mathematical model perspective. It synthesizes theoretical physiological concepts and practical aspects of mathematical modelling needed for simulation and quantitative analysis of the haemodynamic response to dialysis therapy. Including an up-to-date review of the literature concerning the modelled physiological mechanisms and processes, the book serves both as an overview of transport and regulatory mechanisms related to the cardiovascular system and body fluids and as a useful reference for the study and development of mathematical models of

dynamic physiological processes Mathematical Modelling of Haemodialysis Cardiovascular Response Body Fluid Shifts and Solute Kinetics is intended for researchers and graduate students in biomedical engineering physiology or medicine interested in mathematical modelling of cardiovascular dynamics and fluid and solute transport across the human body both under physiological conditions and during haemodialysis therapy

Context-Aware Systems and Applications Phan Cong Vinh, Vangalur Alagar, 2016-04-16 This book constitutes the thoroughly refereed proceedings of the 4th International Conference on Context Aware Systems and Applications ICCASA 2015 held in Vung Tau, Vietnam in November 2015. The 44 revised full papers presented were carefully selected and reviewed from over 100 submissions. The papers cover a wide spectrum of issues in the area of context aware systems. CAS and context based recommendation systems. CAS is characterized by its self facets such as self organization, self configuration, self healing, self optimization, self protection and so on, whose context awareness is used to dynamically control computing and networking functions. The overall goal of CAS is to realize nature inspired autonomic systems that can manage themselves without direct human interventions.

Silver Lining Kamal Shah, 2023-05-22 In 1997 Kamal Shah's world turned upside down. On his way to study in the US, Shah was completing the formalities for a student visa which included preventive vaccinations for hepatitis, typhoid, measles, mumps and rubella. He developed a slight fever following his shots which he dismissed as a normal side effect. Within twenty-four hours, Shah was forced to rethink. His condition deteriorated overnight, prompting an emergency rush to the hospital. Further tests revealed the unimaginable and

atypical hemolytic uremic syndrome AHUS Kamal needed a kidney transplant A year of painful haemodialysis later Kamal underwent a renal transplant His mother had donated her kidney to her son in the hope that he could survive The surgery was unsuccessful In the last decade and a half Kamal has switched between peritoneal and home dialysis It has been a painful terrifying journey documented painstakingly on his personal blog That blog was the kernel for NephroPlus a company that was born from Kamal s desire to ensure that dialysis became accessible for every patient Kamal Shah is still on dialysis but it has not dimmed his hope or his belief that being diagnosed with terminal kidney disease is not the end of life nor can it prevent you from living the life you want to live That hope has been the driving force behind NephroPlus Today NephroPlus is one of Asia s leading dialysis networks with 320 centres across 4 countries including India Nepal the Philippines and Uzbekistan Since NephroPlus offers specialized dialysis one factor that has been responsible for the overwhelming response has been their charges which are 30 40 per cent lower than those in hospitals like Max or Apollo This is the story not just of NephroPlus but of an entrepreneur like no other This is a unique business memoir with a strong moving touch of the deeply personal Kamal writes with raw honesty about pain and fear and the darker side of healthcare in India Yet this is also a story of faith of grit and determination and ultimately of success Yearbook of Intensive Care and Emergency Medicine 2006 Jean-Louis Vincent,2006-08-08 The Yearbook compiles the most recent developments in experimental and clinical research and practice in one comprehensive reference book The chapters are written by well recognized experts in the field of intensive care and emergency medicine It is addressed to everyone involved in internal medicine anesthesia surgery pediatrics intensive care and emergency medicine Modeling and Control of Dialysis Systems Ahmad Taher Azar,2012-08-04 This book is the first text of its kind that presents both the traditional and the modern aspects of dialysis modeling and control in a clear insightful and highly comprehensive writing style It provides an in depth analysis of the mathematical models and algorithms and demonstrates their applications in real world problems of significant complexity It explains concepts in a clear matter of fact style The material of this book will be useful to advanced undergraduate and graduate biomedical engineering students Also researchers and practitioners in the field of dialysis control systems soft computing will benefit from it In order to make the reader aware of the applied side of the subject the book includes Chapter openers with a chapter outline chapter objectives key terms list and abstract Solved numerical examples to illustrate the application of a particular concept and also to encourage good problem solving skills More than 1000 questions to give the readers a better insight to the subject Case studies to understand the significance of the joint usage of the dialysis modeling and control techniques in interesting problems of the real world latest information including latest research surveys and references related to the subjects Fuzzy Systems Ahmad Taher Azar,2010-02-01 While several books are available today that address the mathematical and philosophical foundations of fuzzy logic none unfortunately provides the practicing knowledge engineer system analyst and project manager with specific practical information about fuzzy system modeling

Those few books that include applications and case studies concentrate almost exclusively on engineering problems pendulum balancing truck backerupers cement kilns antilock braking systems image pattern recognition and digital signal processing Yet the application of fuzzy logic to engineering problems represents only a fraction of its real potential As a method of encoding and using human knowledge in a form that is very close to the way experts think about difficult complex problems fuzzy systems provide the facilities necessary to break through the computational bottlenecks associated with traditional decision support and expert systems Additionally fuzzy systems provide a rich and robust method of building systems that include multiple conflicting cooperating and collaborating experts a capability that generally eludes not only symbolic expert system users but analysts who have turned to such related technologies as neural networks and genetic algorithms Yet the application of fuzzy logic in the areas of decision support medical systems database analysis and mining has been largely ignored by both the commercial vendors of decision support products and the knowledge engineers who use them
