Smart Solutions in Power Engineering, Robotics and Human Centered Systems Teresa Zielinska, 2025-11-14 The book presents key aspects of energy robotics automation and control with particular emphasis on modern control methods based on artificial intelligence energy issues and human centered systems Broadly understood artificial intelligence methods are used when developing modern technical and service systems Automation modern control methods and robotization are the basis of current technical progress With growing energy needs the issue of the efficiency of energy systems becomes crucial not only in the context of classic energy networks but also in the context of local power systems for machines and devices This book covers these important pillars encouraging the reader to take a comprehensive look at contemporary technical development The key goal of the book is to educate readers on innovative approaches supporting the development of autonomous and efficient engineering systems The content provides an integrated insight into the development of engineering systems The book contains high quality selected and peer reviewed papers from the 2025 3rd International Conference on Power and Automation Engineering contributions from various authors from diverse sectors of science and industry presenting cutting edge solutions and effective implementations The book will be a useful source of information for postgraduate students academics industry representatives and decision makers in modern engineering interested in exploring the potential of new technologies in the context of sustainable development

Separated and Vortical Flow in Aircraft Wing Aerodynamics Ernst Heinrich Hirschel, Arthur Rizzi, Christian Breitsamter, Werner Staudacher, 2020-10-04 Fluid mechanical aspects of separated and vortical flow in aircraft wing aerodynamics are treated The focus is on two wing classes 1 large aspect ratio wings and 2 small aspect ratio delta type wings Aerodynamic design issues in general are not dealt with Discrete numerical simulation methods play a progressively larger role in aircraft design and development Accordingly in the introduction to the book the different mathematical models are considered which underlie the aerodynamic computation methods panel methods RANS and scale resolving methods Special methods are the Euler methods which as rather inexpensive methods embrace compressibility effects and also permit to describe lifting wing flow The concept of the kinematically active and inactive vorticity content of shear layers gives insight into many flow phenomena but also with the second break of symmetry the first one is due to the Kutta condition an explanation of lifting wing flow fields The prerequisite is an extended definition of separation flow off separation at sharp trailing edges of class 1 wings and at sharp leading edges of class 2 wings The vorticity content concept with a compatibility condition for flow off separation at sharp edges permits to understand the properties of the evolving trailing vortex layer and the resulting pair of trailing vortices of class 1 wings The concept also shows that Euler methods at sharp delta or strake leading edges of class 2 wings can give reliable results Three main topics are treated 1 Basic Principles are considered first boundary layer flow vortex theory the vorticity content of shear layers Euler solutions for lifting wings the Kutta condition in reality and the topology of skin friction

and velocity fields 2 Unit Problems treat isolated flow phenomena of the two wing classes Capabilities of panel and Euler methods are investigated One Unit Problem is the flow past the wing of the NASA Common Research Model Other Unit Problems concern the lee side vortex system appearing at the Vortex Flow Experiment 1 and 2 sharp and blunt edged delta configurations at a delta wing with partly round leading edges and also at the Blunt Delta Wing at hypersonic speed 3 Selected Flow Problems of the two wing classes In short sections practical design problems are discussed The treatment of flow past fuselages although desirable was not possible in the frame of this book *Exterior Ballistics* George Klimi, 2014 The noteworthy findings and innovative methods of predicting projectile trajectory introduced in my books *Exterior Ballistics A New Approach* EBNA Xlibris 2010 and *Exterior Ballistics with Applications* EBA3e Xlibris third edition December 2011 require a methodical approach and further development As result the amateurs and professionals interested in exterior ballistics of firearms and especially in long range shooting with small arms have a new book *Exterior Ballistics The Remarkable Methods* EBRM that aims to enrich the foundations of modern exterior ballistics and to lessen the complexity of physics and mathematics techniques in use *Exterior Ballistics The Remarkable Methods* is a book that combines and develops further the methods introduced in EBA3e EBNA and in the *Exterior Ballistics of Small Arms* EBSA Xlibris 2009 The foundations of the book are mainly the findings and the innovative ballistics methods presented in EBA3e and EBNA The remarkable methods of exterior ballistics presented in this new book include The methods of determining the function of resistance G_v of a given bullet i 1 using range tables or the experimental data measurements of three or four coordinates at the points of projectile impact The model of Tangent Law of Trajectory Refraction and the related set of formulas that we use to study the trajectories of projectiles in nonstandard atmosphere Series expansion method and the techniques of second to sixth order parabolas we employ to predict with great accuracy the projectile trajectory The exceptional Siacci's methods that we apply as well for the projectile trajectory in nonstandard atmosphere and in inclined shooting combined with the tangent law of trajectory refraction It is important to note that using the similarity laws of fluid dynamics we have obtained the tangent law of projectile refraction which represents a progress with respect to Newton Snell's law on projectile refraction For better understanding of the information presented in the book the reader should refer to my three preceding books on exterior ballistics already published by Xlibris although most of the material is self contained and clear enough to be accessed and assimilated by a wide range of readers The system of units used in the book is the International System SI For readers that are unfamiliar with the SI system it is not difficult to become accustomed and use the materials presented in the book to benefit from the simple illustrations exercises and PC programs that at the same time give answers to many problems encountered in practice My studies and writing work in exterior ballistics intend to find new and simple mathematical models and methods to predict the elements of the projectile trajectory I believe that I have achieved some good results which need to be further developed George Klimi PhD New York December 2012 gklimi pace edu iven24 aol com

The Fluid Dynamic Basis for Actuator Disc and Rotor Theories Gijs van Kuik, 2022-06-15 The first rotor performance predictions were published by Joukowsky exactly 100 years ago Although a century of research has expanded the knowledge of rotor aerodynamics enormously and modern computer power and measurement techniques now enable detailed analyses that were previously out of reach the concepts proposed by Froude Betz Joukowsky and Glauert for modelling a rotor in performance calculations are still in use today albeit with modifications and expansions This book is the result of the author's curiosity as to whether a return to these models with a combination of mathematics dedicated computations and wind tunnel experiments could yield more physical insight and answer some of the old questions still waiting to be resolved Although most of the work included here has been published previously the book connects the various topics linking them in a coherent storyline The Fluid Dynamic Basis for Actuator Disc and Rotor Theories was first published in 2018 This Revised Second Edition 2022 will be of interest to those working in all branches of rotor aerodynamics wind turbines propellers ship screws and helicopter rotors It has been written for proficient students and researchers and reading it will demand a good knowledge of inviscid fluid mechanics Jens Nørk Sørensen DTU Technical University of Denmark a great piece of work which in a consistent way highlights many of the items that the author has worked on through the years All in all an impressive contribution to the classical work on propellers wind turbines Peter Schaffarczyk Kiel University of Applied Sciences Germany a really impressive piece of work Carlos Simão Ferreira Technical University Delft This is a timely book for a new generation of rotor aerodynamicists from wind turbines to drones and

personal air vehicles In a time where fast numerical solutions for aerodynamic design are increasingly available a clear theoretical and fundamental formulation of the rotor wake problem will help professionals to evaluate the validity of their design problem The Fluid Dynamic Basis for Actuator Disc and Rotor Theories is a pleasure to read while the structure text and figures are just as elegant as the theory presented The cover shows The Red Mill by Piet Mondriaan 1911 collection Gemeentemuseum Den Haag Cover image 2022 Mondrian Holtzman Trust Economics of Power Systems Christoph Weber,Dominik Möst,Wolf Fichtner,2022-11-14 In order to manage the transition towards a sustainable future electricity system an in depth understanding of the key technological economic environmental and societal drivers for electricity markets is required Suitable for advanced undergraduate and graduate students this textbook provides an overview of these drivers and introduces readers to major economic models and empirical evidence for the study of electricity markets and systems Readers will learn about electricity generation demand transport and storage as well as the fundamentals of grid and electricity markets in Europe By introducing them to state of the art models from operations research and economics the book provides a solid basis for analytical insights and numerical modeling Furthermore the book discusses the policy instruments and design choices for electricity market regulation and sustainable power system development as well as the current challenges for smart energy systems *A Guide to Fluid Mechanics* Hongwei Wang,2023-03-23 This book is written for the learner s point of view with the purpose of helping readers understand the principles of flow The theory is explained using ordinary and accessible language where fluid mechanics is presented in analogy to solid mechanics to emphasize that they are all the application of Newtonian mechanics and thermodynamics All the informative and helpful illustrations are drawn by the author uniting the science and the art with figures that complement the text and provide clear understanding Another unique feature is that one of the chapters is wholly dedicated to providing 25 selected interesting and controversial flow examples with the purpose of linking theory with practice The book will be useful to both beginners in the field and experts in other fields and is ideal for college students graduate students engineers and technicians **McGraw-Hill Concise Encyclopedia of Engineering** McGraw Hill,2005-06-15 Hundreds of well illustrated articles explore the most important fields of science Based on content from the McGraw Hill Concise Encyclopedia of Science Technooogy Fifth Edition the most widely used and respected science reference of its kind in print each of these subject specific quick reference guides features Detailed well illustrated explanations not just definitions Hundreds of concise yet authoritative articles in each volume An easy to understand presentation accessible and interesting to non specialists A portable convenient format Bibliographies appendices and other information supplement the articles **Forthcoming Books** Rose Army,2001 **Solutions Manual to Accompany Fundamentals of Aerodynamics** John D.
