Fundamentals of Machine Learning for Predictive Data Analytics John D. Kelleher, Brian Mac Namee, Aoife D'Arcy, 2015-07-24 A comprehensive introduction to the most important machine learning approaches used in predictive data analytics covering both theoretical concepts and practical applications Machine learning is often used to build predictive models by extracting patterns from large datasets. These models are used in predictive data analytics applications including price prediction risk assessment predicting customer behavior and document classification This introductory textbook offers a detailed and focused treatment of the most important machine learning approaches used in predictive data analytics covering both theoretical concepts and practical applications Technical and mathematical material is augmented with explanatory worked examples and case studies illustrate the application of these models in the broader business context After discussing the trajectory from data to insight to decision the book describes four approaches to machine learning information based learning similarity based learning probability based learning and error based learning Each of these approaches is introduced by a nontechnical explanation of the underlying concept followed by mathematical models and algorithms illustrated by detailed worked examples Finally the book considers techniques for evaluating prediction models and offers two case studies that describe specific data analytics projects through each phase of development from formulating the business problem to implementation of the analytics solution. The book informed by the authors many years of teaching machine learning and working on predictive data analytics projects is suitable for use by undergraduates in computer science engineering mathematics or statistics by graduate students in disciplines with applications for predictive data analytics and as a reference for professionals **Innovative Computing and Communications** Aboul Ella Hassanien, Sameer Anand, Ajay Jaiswal, Prabhat Kumar, 2025-09-26 This book includes high quality research papers presented at the Eighth International Conference on Innovative Computing and Communication ICICC 2025 which is held at the Shaheed Sukhdev College of Business Studies University of Delhi Delhi India on 14 15 February 2025 Introducing the innovative works of scientists professors research scholars students and industrial experts in the field of computing and communication the book promotes the transformation of fundamental research into institutional and industrialized research and the conversion of applied exploration into real time applications Advanced Intelligent Virtual Reality **Technologies** Kazumi Nakamatsu, Srikanta Patnaik, Roumen Kountchev, Ruidong Li, Ari Aharari, 2023-01-19 This book gathers a collection of selected works and new research results of scholars and graduate students presented at the 6th International Conference on Artificial Intelligence and Virtual Reality AIVR 2022 via the Internet during July 22 24 2022 hosted and organized by Sojo University in conjunction with other three universities and Beijing Huaxia Rongzhi Blockchain Technology Institute The focus of the book is interdisciplinary in nature and includes research on all aspects of artificial intelligence and

convenient access to an unfamiliar area as well as established researchers seeking a single repository on the current debates and literature in the field Artificial Intelligence Alan Dix, 2025-06-16 An authoritative and accessible one stop resource the first edition of An Introduction to Artificial Intelligence presented one of the first comprehensive examinations of AI Designed to provide an understanding of the foundations of artificial intelligence it examined the central computational techniques employed by AI including knowledge representation search reasoning and learning as well as the principal application domains of expert systems natural language vision robotics software agents and cognitive modelling Many of the major philosophical and ethical issues of AI were also introduced This new edition expands and revises the book throughout with new material to augment existing chapters including short case studies as well as adding new chapters on explainable AI big data and deep learning temporal and web scale data statistical methods and data wrangling It expands the book s focus on human centred AI covering gender ethnic and social bias the need for transparency intelligent user interfaces and designing interactions to aid machine learning With detailed well illustrated examples and exercises throughout this book provides a substantial and robust introduction to artificial intelligence in a clear and concise coursebook form It stands as a core text for all students and computer scientists approaching AI You can also visit the author website for further resources https alandix com aibook Data Mining and Exploration Chong Ho Alex Yu, 2022-10-27 This book introduces both conceptual and procedural aspects of cutting edge data science methods such as dynamic data visualization artificial neural networks ensemble methods and text mining There are at least two unique elements that can set the book apart from its rivals First most students in social sciences engineering and business took at least one class in introductory statistics before learning data science However usually these courses do not discuss the similarities and differences between traditional statistics and modern data science as a result learners are disoriented by this seemingly drastic paradigm shift In reaction some traditionalists reject data science altogether while some beginning data analysts employ data mining tools as a black box without a comprehensive view of the foundational differences between traditional and modern methods e g dichotomous thinking vs pattern recognition confirmation vs exploration single method vs triangulation single sample vs cross validation etc This book delineates the transition between classical methods and data science e g from p value to Log Worth from resampling to ensemble methods from content analysis to text mining etc Second this book aims to widen the learner s horizon by covering a plethora of software tools When a technician has a hammer every problem seems to be a nail By the same token many textbooks focus on a single software package only and consequently the learner tends to fit the problem with the tool but not the other way around To rectify the situation a competent analyst should be equipped with a tool set rather than a single tool For example when the analyst works with crucial data in a highly regulated industry such as pharmaceutical and banking commercial software modules e g SAS are indispensable For a mid size and small company open source packages such as Python would come in handy If the research goal is to create an executive summary quickly the

logical choice is rapid model comparison If the analyst would like to explore the data by asking what if questions then dynamic graphing in JMP Pro is a better option This book uses concrete examples to explain the pros and cons of various software applications Speech and Computer Alexey Karpov, Rodmonga Potapova, 2021-09-22 This book constitutes the proceedings of the 23rd International Conference on Speech and Computer SPECOM 2021 held in St Petersburg Russia in September 2021 The 74 papers presented were carefully reviewed and selected from 163 submissions The papers present current research in the area of computer speech processing including audio signal processing automatic speech recognition speaker recognition computational paralinquistics speech synthesis sign language and multimodal processing and speech and language resources Due to the COVID 19 pandemic SPECOM 2021 was held as a hybrid event Artificial Intelligence, Big Data, and Blockchain Paul Moon Sub Choi, Seth H.
