Statistical Signal Processing T. Chonavel, 2012-12-06 Modern information systems must handle huge amounts of data having varied natural or technological origins Automated processing of these increasing signal loads requires the training of specialists capable of formalising the problems encountered This book supplies a formalised concise presentation of the basis of statistical signal processing Equal emphasis is placed on approaches related to signal modelling and to signal estimation In order to supply the reader with the desirable theoretical fundamentals and to allow him to make progress in the discipline the results presented here are carefully justified The representation of random signals in the Fourier domain and their filtering are considered These tools enable linear prediction theory and related classical filtering techniques to be addressed in a simple way The spectrum identification problem is presented as a first step toward spectrum estimation which is studied in non parametric and parametric frameworks The later chapters introduce synthetically further advanced techniques that will enable the reader to solve signal processing problems of a general nature Rather than supplying an exhaustive description of existing techniques this book is designed for

students scientists and research engineers interested in statistical signal processing and who need to acquire the necessary grounding to address the specific problems with which they may be faced It also supplies a well organized introduction to the literature
