Managing Business and Service Networks Lundy Lewis, 2005-12-07 Most everything in our experience requires management in some form or other our gardens our automobiles our minds our bodies our love lives our businesses our forests our countries etc Sometimes we don't call it management per se We seldom talk about managing our minds or automobiles But if we think of management in terms of monitoring maintaining and cultivating with respect to some goal then it makes sense We certainly monitor an automobile albeit unconsciously to make sure that it doesn't exhibit signs of trouble And we certainly try to cultivate our minds This book is about managing networks That itself is not a new concept We've been managing the networks that support our telephones for about 100 years and we've been managing the networks that support our computers for about 20 years What is new and what motivated me to write this book is the following i the enormous advancements in networking technology as we transition the 20th century to the 21st century ii the increasing dependence of human activities on networking technology and iii the commercialization of services that depend on networking technology e.g. email and electronic commerce

IP Address Management Timothy Rooney, 2011-04-20 This book will be the first covering the subject of IP address management IPAM The practice of IPAM includes the application of network management disciplines to IP address space and associated network services namely DHCP Dynamic Host Configuration Protocol and DNS Domain Name System The consequence of inaccurately configuring DHCP is that end users may not be able to obtain IP addresses to access the network Without proper DNS configuration usability of the network will greatly suffer as the name to address lookup process may fail Imagine having to navigate to a website or send an email or an instant message by IP address instead of by name It s equally important that these DHCP and DNS configurations be based on a common IP address plan which maps out the IP address hierarchy subnets address pools and domains IPAM applies management disciplines to these core services including configuration change control auditing reporting and so on and they are necessary given the absolute requirement for properly managing IP space and DHCP and DNS servers The linkages

among an IP address plan DHCP server configuration and DNS server configuration are inseparable a change of an IP address will affect DNS information and perhaps DHCP as well These functions provide the foundation for today's converged services IP networks so they need to be managed using a rigorous approach Today there is no single book that covers the management of these linkages and services they provide IP Address Management Principles and Practice will fill that gap While several books are available for leading vendors DHCP and DNS services implementations few exist for IP address planning and none exist that unifies these three topics To obtain a free copy of the IPAM Configuration Guide please send an email to ieeeproposals@wiley.com
