1. Reproduced below is the telephone game from Section 4.2. Find all Nash equilibria in mixed strategies.

The Telephone Game

		Winnie	
		Call	Wait
Colleen	Call	0,0	2,3
	Wait	3,2	1,1

ANSWER: Let p denote the probability that Colleen chooses call and q the probability that Winnie chooses call. For Colleen to be indifferent, Winnie must randomize in such a way that Colleen's expected payoff from call is the same as her expected payoff from wait:

$$q \cdot 0 + (1 - q) \cdot 2 = q \cdot 3 + (1 - q) \cdot 1 \implies q = \frac{1}{4}.$$

Thus, if Winnie calls with probability $\frac{1}{4}$, then Colleen is indifferent between calling and waiting. Of course, for Winnie to find it optimal to randomize, she must receive the same expected payoff from her two pure strategies, which requires that Colleen choose p , so that

$$p \cdot 0 + (1 - p) \cdot 2 = p \cdot 3 + (1 - p) \cdot 1 \implies p = \frac{1}{4}.$$

Since this is a symmetric game, it is not surprising that the equilibrium is symmetric. The telephone game then has three Nash equilibria: (1) Colleen chooses call and Winnie chooses wait; (2) Colleen chooses wait and Winnie chooses call; and (3) both Colleen and Winnie choose call with probability $\frac{1}{4}$ and wait with probability $\frac{3}{4}$.

2. The count is three balls and two strikes, and the bases are empty. The batter wants to maximize the probability of getting a hit or a walk, while the pitcher wants to minimize this probability. The pitcher has to decide whether to throw a fast ball or a curve ball,

Games, Strategies and Decision Making Joseph Harrington, 2009-03-15 *Fuzzy and Multiobjective Games for Conflict Resolution* Ichiro Nishizaki, Masatoshi Sakawa, 2013-06-05 Decision makers in managerial and public organizations often encounter decision problems under conflict or competition because they select strategies independently or by mutual agreement and therefore their payoffs are then affected by the strategies of the other decision makers Their interests do not always coincide and are at times even completely opposed Competition or partial cooperation among decision makers should be considered as an essential part of the problem when we deal with the decision making problems in organizations which consist of decision makers with conflicting interests Game theory has been dealing with such problems and its techniques have been used as powerful analytical tools in the resolution process of the decision problems The publication of the great work by J von Neumann and O Morgenstern in 1944 attracted attention of many people and laid the foundation of game theory We can see remarkable advances in the field of game theory for analysis of economic situations and a number of books in the field have been published in recent years The aim of game theory is to specify the behavior of each player so as to optimize the interests of the player It then recommends a set of solutions as strategies so that the actions chosen by each decision maker player lead to an outcome most profitable for himself or her self **Games Strategies & Decision Making**

Games, Strategies, and Decision Making Joseph E. Harrington, Jr., 2014-11-17 Written for majors courses in economics business political science and international relations but accessible to students across the undergraduate spectrum Joseph Harrington's innovative textbook makes the tools and applications of game theory and strategic reasoning both fascinating and easy to understand Each chapter focuses a specific strategic situation as a way of introducing core concepts informally at first then more fully with a minimum of mathematics At the heart of the book is a diverse collection of strategic scenarios not only from business and politics but from history fiction sports and everyday life as well With this approach students don't just learn clever answers to puzzles but instead acquire genuine insights into human behavior

Encyclopaedia of Mathematics Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet

Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

Quantitative Methods for Business Decisions Lawrence L.
