

Chapter Three ISENTROPIC FLOW OF A PERFECT GAS

Problem 1. - Air flows at Mach 0.25 through a circular duct with a diameter of 60 cm. The stagnation pressure of the flow is 500 kPa; the stagnation temperature is 175°C. Calculate the mass flow rate through the channel, assuming $\gamma = 1.4$ and that the air behaves as a perfect gas with constant specific heats.

$$p = \left(\frac{p}{p_0} \right) 500 \text{ kPa} = 0.9575(500) = 478.7500 \text{ kPa}$$

$$T = \left(\frac{T}{T_0} \right) (175 + 273) = 0.9877(448) = 442.4896 \text{ K}$$

$$\rho = \frac{p}{RT} = \frac{(478.75 \text{ kN/m}^2)}{(0.287 \text{ kN} \cdot \text{m/kg} \cdot \text{K})(442.4896 \text{ K})} = 3.7698 \text{ kg/m}^3$$

$$A = \frac{\pi}{4} (0.6)^2 = 0.2827 \text{ m}^2$$

$$V = M \sqrt{\gamma RT} = 0.25 \sqrt{1.4(287 \text{ N} \cdot \text{m/kg} \cdot \text{K})(442.4896 \text{ K})} = 105.4136 \text{ m/s}$$

$$\dot{m} = \rho AV = 112.3603 \text{ kg/s}$$

stagnation pressure of the flow is 1 MPa, and stagnation temperature is 1000 K. Calculate the mass flow rate through the channel, with $\gamma = 5/3$.

$$p = \left(\frac{p}{p_0} \right) 1 \text{ MPa} = 0.8186(1000 \text{ kPa}) = 818.6 \text{ kPa}$$

$$T = \left(\frac{T}{T_0} \right) (1000 \text{ K}) = 0.9234(1000) = 923.4 \text{ K}$$

Numerical Methods for Partial Differential Equations Sandip Mazumder, 2015-12-01 Numerical Methods for Partial Differential Equations Finite Difference and Finite Volume Methods focuses on two popular deterministic methods for solving partial differential equations PDEs namely finite difference and finite volume methods The solution of PDEs can be very challenging depending on the type of equation the number of independent variables the boundary and initial conditions and other factors These two methods have been traditionally used to solve problems involving fluid flow For practical reasons the finite element method used more often for solving problems

in solid mechanics and covered extensively in various other texts has been excluded The book is intended for beginning graduate students and early career professionals although advanced undergraduate students may find it equally useful The material is meant to serve as a prerequisite for students who might go on to take additional courses in computational mechanics computational fluid dynamics or computational electromagnetics The notations language and technical jargon used in the book can be easily understood by scientists and engineers who may not have had graduate level applied mathematics or computer science courses Presents one of the few available resources that comprehensively describes and demonstrates the finite volume method for unstructured mesh used frequently by practicing code developers in industry Includes step by step algorithms and code snippets in each chapter that enables the reader to make the transition from equations on the page to working codes Includes 51 worked out examples that comprehensively demonstrate important mathematical steps algorithms and coding practices required to numerically solve PDEs as well as how to interpret the results from both physical and mathematic perspectives

Numerical Solutions of the Euler Equations for Steady Flow Problems Albrecht Eberle, Arthur Rizzi, Ernst Heinrich Hirschel, 2013-04-17 The last decade has seen a dramatic increase of our abilities to solve numerically the governing equations of fluid mechanics In design aerodynamics the classical potential flow methods have been complemented by higher modelling level methods Euler solvers and for special purposes already Navier Stokes solvers are in use The authors of this book have been working on the solution of the Euler equations for quite some time While the first two of us have worked mainly on algorithmic problems the third has been concerned off and on with modelling and application problems of Euler methods When we started to write this book we decided to put our own work at the center of it This was done because we thought and we leave this to the reader to decide that our work has attained over the years enough substance in order to justify a book The problem which we soon faced was that the field still is moving at a fast pace for instance because hyper sonic computation problems became more and more important
