Stratospheric Ozone Depletion and Climate Change Rolf Müller (physicien.), 2012 In recent years several new concepts have emerged in the field of stratospheric ozone depletion creating a need for a concise in depth publication covering the ozone climate issue This monograph fills that void in the literature and gives detailed treatment of recent advances in the field of stratospheric ozone depletion It puts particular emphasis on the coupling between changes in the ozone layer and atmospheric change caused by a changing climate The book written by leading

experts in the field brings the reader the most recent research in this area and fills the gap between advanced textbooks and assessments **Remote Sensing of Energy Fluxes and Soil Moisture Content** George P. Petropoulos, 2013-10-28

Integrating decades of research conducted by leading scientists in the field Remote Sensing of Energy Fluxes and Soil Moisture Content provides an overview of state of the art methods and modeling techniques employed for deriving spatio temporal estimates of energy fluxes and soil surface moisture from remote sensing It also underscores the range of such techniques available nowadays as well as the operationally distributed networks that provide today in situ validated relevant observations The book brings together three types of articles Comprehensive reviews that examine the developments in concepts methods and techniques employed in deriving land surface heat fluxes as well as soil surface moisture on field regional and large scales paying particular emphasis to the techniques exploiting Earth Observation EO technology Detailed insights into the principles and operation of the most widely applied approaches for the quantification and analysis of surface fluxes and soil moisture with case studies that directly show the great applicability of remote sensing in this field or articles discussing specific issues in the retrievals of those parameters from space Focused articles integrating current knowledge and scientific understanding in the remote sensing of energy fluxes and soil moisture that are highlighting the main issues challenges and future prospects of this emerging technology Designed with different users in mind the book is organized in four more or less independent units that make specific information easy to find It presents a discussion on the future trends and prospects underlying the scientific challenges that need to be addressed adequately in order to derive more accurate estimates of those parameters from space Environmental Remote Sensing and Systems Analysis Ni-Bin

Chang, 2012-03-23 Using a systems analysis approach and extensive case studies Environmental Remote Sensing and Systems Analysis shows how remote sensing can be used to support environmental decision making It presents a multidisciplinary framework and the latest remote sensing tools to understand environmental impacts management complexity and policy implicatio Remote Sensing and Atmospheric Ozone Arthur Philip Cracknell, Costas

Varotsos, 2012-06-21 The destruction of the ozone layer together with global warming is one of the hot environmental topics of today This book examines the effect of human activities on atmospheric ozone namely the increase of tropospheric ozone and the general diminution of stratospheric ozone and the production of the Antarctic ozone hole Also discussed is the role of remote sensing techniques in the understanding of the effects of human activities on atmospheric ozone as well as in the development of social and political awareness of the damage to the ozone layer by man made chemicals principally CFCs This led to the formulation and ratification in 1989 of the Montreal Protocol on controlling banning the manufacture and use of chemicals that damage the ozone layer Since then remote sensing has played a key role in monitoring atmospheric ozone concentration and determining the success of the Montreal Protocol in protecting the ozone layer from further damage In this book the renowned authors discuss the sophisticated instruments that have been launched into space to study not only

ozone but also other trace gases in the atmosphere some of which play a key role in the generation and destruction of ozone in the atmosphere Professors Cracknell and Varotsos also examine the satellite flown instruments which are involved in monitoring the absorption of solar ultraviolet light in the atmosphere in relation both to the generation and destruction of ozone and consequently to human health This scholarly book written by the foremost experts in the field looks at remote sensing and its employment in the various aspects of ozone science It is widely acknowledged that global warming due to anthropogenic greenhouse gases emissions represents a threat to the sustainability of human life on Earth However many other threats are potentially just as serious including atmospheric pollution ozone depletion water pollution the degradation of agricultural land deforestation the depletion of the world's mineral resources and population growth
