century university based business schools re oriented themselves to increased alignment with the preferences of the university and decreased alignment with the preferences of business This re alignment has caused multiple observers to question the effectiveness of current day business schools For example recent discussions have lamented that business schools are engaged in research that does not influence the practice of business This book engages these debates arguing that all judgments about the effectiveness of business schools are rooted in assumptions about what the purposes of the business school appropriately are and that many of those assumptions are unstated and not subjected to debate The author weaves a unique blend of complexity theory philosophy of science and the nature of professions to articulate those goals and assess the effectiveness at meeting them The book traces parallel discussions regarding the purpose of the university in the writings of Aristotle and Wilhelm von Humboldt and ties those discussions to current debates This book will inform business faculty and administrators of the degree to which university based business schools are balancing multiple purposes which

include discovery of knowledge creating knowledge that informs the practice of business training professionals and instilling ethical principles in its training of those professionals *British Qualifications 2014* Kogan Page Editorial Staff,2013-12-03
