2013 CFA Level 1 Kaplan Schweser Staff, 2012 *Using Fundamental Analysis and an Ensemble of Classifier Models Along with a Risk-Off Filter to Select Outperforming Companies* Manuel Moura, Rui Neves, 2024-06-18 This book develops a quantitative stock market investment methodology using financial indicators that beats the benchmark of S P500 index To achieve this goal an ensemble of machine learning models is meticulously constructed incorporating four distinct algorithms support vector machine k nearest neighbors random forest and logistic regression These models all make use of financial ratios extracted from company financial statements for the purposes of predictive forecasting The ensemble classifier is subject to a strict testing of precision which compares it to the performance of its constituent models separately Rolling window and cross validation tests are used in this evaluation in order to provide a comprehensive assessment framework A risk off filter is developed to limit risk during uncertain market periods and consequently to improve the Sharpe ratio of the model The risk adjusted performance of the final model supported by the risk off filter achieves a Sharpe ratio of 1.63 which surpasses both the model's performance without the filter that delivers Sharpe ratio of 1.41 and the one from the S P500 index of 0.80 The substantial increase in risk adjusted returns is accomplished by reducing the model's volatility from an annual standard of deviation of 15.75% to 11.22% which represents an almost 30% decrease in volatility

The Everyday Practice of Valuation and Investment Horacio

Ortiz,2021-11-23 The financial industry derives its legitimacy through the claim that it acts in the interest of shareholders A vast international network of funds banks insurance companies brokerages rating agencies and regulatory agencies defends its status by asserting that market mechanisms determine a company s true value and therefore enriching shareholders contributes to the socially optimal allocation of capital Is this how stock prices are determined in practice What does stock valuation reveal about the supposed efficiency of markets and what it means to act on behalf of shareholders Horacio Ortiz provides a critical analysis of the social institutions and practices that produce and regulate stock pricing and valuation He examines how financial professionals evaluate and invest in listed companies unraveling the contradictory definitions of financial value that shape their behavior Ortiz demonstrates how ideologically laden notions of investing skill and efficient markets are central to the everyday practices of financial valuation as well as how they function to justify the broader system He scrutinizes the technical aspects of valuation and investment their place in social relations within and among companies and their relation to state regulation in order to demystify how the financial industry presents prices as truths that the rest of society must accept Drawing on ethnographic fieldwork conducted among stock brokers and investment management companies in New York and Paris this book shows how the political imaginaries that underpin financial markets are central to producing sustaining and legitimizing global inequalities *Professional Investor* ,2008
