Interdisciplinary Research Journeys Catherine Lyall,Ann Bruce,Joyce Tait,Laura Meagher,2011-05 Interdisciplinarity has become a rallying cry among funders and leaders of research Yet while the creative potential of interdisciplinary research is great it poses many challenges This book provides a practical guide to interdisciplinary research to help build interdisciplinary skills and mobilise a new and growing research community *Making a World of Difference* National Academy of Engineering,2014-01-01 Fifty years ago the National Academy of Engineering NAE was founded by the stroke of a pen when the National Academy of Sciences Council approved the NAE s articles of organization Making a World of Difference commemorates the NAE anniversary with a collection of essays that highlight the prodigious changes in people s lives that have been created by engineering over the past half century and consider how the future will be similarly shaped Over the past 50 years engineering has transformed our lives literally every day and it will continue to do so going forward utilizing new capabilities creating new applications and providing ever expanding services to people The essays of Making a World of Difference discuss the seamless integration of engineering into both our society and our daily lives and present a vision of what engineering may deliver in the next half century Chemical Processes for a Sustainable Future Trevor Letcher,Janet Scott,Darrell Patterson,2015-11-09 This comprehensive book approaches sustainability from two directions the

reduction of pollution and the maintaining of existing resources both of which are addressed in a thorough examination of the main chemical processes and their impact. Divided into five sections each introduced by a leading expert in the field, the book takes the reader through the various types of chemical processes demonstrating how we must find ways to lower the environmental cost of both pollution and contributions to climate change of producing chemicals. Each section consists of several chapters presenting the latest facts and opinion on the methodologies being adopted by the chemical industry to provide a more sustainable future. A follow up to *Materials for a Sustainable Future* (Royal Society of Chemistry, 2012), this book will appeal to the same broad readership: industrialists and investors, policy makers in local and central governments, students, teachers, scientists and engineers working in the field, and finally editors, journalists and the general public who need information on the increasingly popular concepts of sustainable living.

Fixing Food Richard A. Williams Ph.D., 2021-10-19

With about half of the U.S. population expected to be obese by 2030 and one out of six Americans getting sick every year, why is the Food and Drug Administration spending years trying to figure out if almond milk should be called milk? As a twenty-seven year veteran of the FDA's Center for Food Safety and Nutrition, Dr. Richard A. Williams poses this question. Dr. Williams also questions the accuracy of more than thirty years of food labeling coupled with consumer education on diet-disease relationships and failed attempts to get consumers to track intakes. It is time for the American people to look elsewhere for solutions rather than relying on the FDA. *Fixing Food* takes you inside the FDA and explores the inner workings that drove failed strategies. Following his tenure at the FDA, Dr. Williams spent more than a decade investigating new sciences including genetic and microbial sciences that are leading to innovative foods and products. With one of the greatest public health crises in American history ongoing, this research aims to solve our issues with food once and for all. In this book, you will learn: How FDA controls Congress, the Courts, and the Executive Branch and others who might be a threat to their resources and growth of power; How the FDA misuses risk assessment and cost-benefit analysis; How the FDA's most recent innovation to keep food safe is fifty years old; Why food labeling has been a disaster; How entrepreneurs are remaking foods to be safer and healthier; How new medical devices will ultimately make nutrition as easy as using a cell phone; How trying to educate consumers through food labeling has been a public health disaster. Ultimately, the role of the FDA in the new world of food safety and nutrition must change if the agency is to stay relevant.
