Perception Nicola Bruno, Francesco Pavani, 2018-07-26 The way that we interact with the environment on a daily basis is inherently multisensory Even a simple task such as judging the location of a light in a dark room depends not only on vision but also on proprioceptive cues about the position of our body in space The way that we experience food can be influenced not just by taste and smell but by visual and auditory cues Perception A multisensory perspective adopts a multisensory approach to understanding perception Rather than discussing each sense separately this book defines perception as intrinsically multisensory from the start and examines multisensory interactions as the key process behind how we perceive our own body control its movements and perceive and recognise objects space and time But the book delves even deeper It discusses multisensory processing in conditions such as synaesthesia It addresses attention and the role of multisensory processing in learning By focussing on these domains the authors highlight and identify general principles in the field of perception study and introduce models experimental methods and pathologies that will be of interest to all those studying within the field of perception The authors also illustrate applications that will be of interest to professionals whose work takes multisensory processing into account As an introduction to the topic of multisensory perception Perception A multisensory perspective will be essential reading for students from advanced undergraduate level through to postgraduate level in psychology philosophy and neuroscience Those studying physiotherapy and neurological rehabilitation human computer interface development or the design of products or services will also find this book of interest *Decision Making and Modelling in Cognitive Science* Sisir Roy, 2016-10-26 This book discusses the paradigm of quantum ontology as an appropriate model for measuring cognitive processes It clearly shows the inadequacy of the application of classical probability theory in modelling the human cognitive domain The chapters investigate the context dependence and neuronal basis of cognition in a coherent manner According to this framework epistemological issues related to decision making and state of mind are seen to be similar to issues related to equanimity and neutral mind as discussed in Buddhist perspective The author states that quantum ontology as a modelling tool will help scientists create new methodologies of modelling in other streams of science as well *User Experience Is Brand Experience* Felix van de Sand, Anna-Katharina Frison, Pamela Zotz, Andreas Riener, Katharina Holl, 2019-11-12 This book offers a new method for aligning brand management and user experience goals Brand management deals with conveying individual brand values at all marketing contact points the goal being to reach the target group and boost customer retention In this regard it is important to consider the uniqueness of each brand and its identity so as to design pleasurable and high quality user experiences Combining insights from science and practice the authors present a strategy for using interaction patterns visual appearance and animations to validate the actual brand values that are experienced by users while interacting with a digital product Further they introduce a UX

identity scale by assigning brand values to UX related psychological needs The method applied is subsequently backed by theoretical concepts and illustrated with practical examples and case studies on real world mobile applications
