powertrains particularly with the UK Government's announcement to end the sale of petrol and diesel passenger cars by 2030 and increasing support for alternatives. Despite this announcement, the internal combustion continues to play a significant role both in the passenger car market through the use of hybrids and sustainable low carbon fuels as well as a key role in other sectors such as heavy duty vehicles and off-highway applications across the globe. Building on the industry leading IC Engines conference, the 2021 Powertrain Systems for Net Zero Transport conference (7-8 December 2021, London, UK) focussed on the internal combustion engine's role in Net Zero transport as well as covered developments in the wide range of propulsion systems available: electric, fuel cell, sustainable fuels etc. and their associated powertrains. To achieve the net zero transport across the globe, the life cycle analysis of future powertrain and energy was also discussed. Powertrain Systems for Net Zero Transport provided a forum for engine, fuels, e-machine, fuel cell and powertrain experts to look closely at developments in powertrain technology required to meet the demands of the net zero future and global competition in all sectors of the road transportation, off-highway and stationary power industries.

HCCI and CAI Engines for the Automotive Industry H Zhao, 2007-08-02. Homogeneous charge compression ignition (HCCI) controlled auto ignition (CAI) has emerged as one of the most promising engine technologies with the potential to combine fuel efficiency and improved emissions performance, offering reduced nitrous oxides and particulate matter alongside efficiency comparable with modern diesel engines. Despite the considerable advantages, its operational range is rather limited and controlling the combustion timing of ignition and rate of energy release is still an area of on-going research. Commercial applications are however close to reality. HCCI and CAI engines for the automotive industry presents the state of the art in research and development on an international basis as a one-stop reference work. The background to the development of HCCI/CAI engine technology is described. Basic principles, the technologies and their potential applications, strengths and weaknesses as well as likely future trends and sources of further information are reviewed in the areas of gasoline HCCI/CAI engines, diesel HCCI engines, HCCI/CAI engines with alternative fuels and advanced modelling and experimental techniques. The book provides an invaluable source of information for scientific researchers, R & D engineers and managers in the automotive engineering industry worldwide. Presents the state of the art in research and development on an international basis. An invaluable source of information for scientific researchers, R & D engineers and managers in the automotive engineering industry worldwide. Looks at one of the most promising engine technologies around.
