The Classical Stefan Problem S.C. Gupta,2003-10-22 This volume emphasises studies related to classical Stefan problems The term Stefan problem is generally used for heat transfer problems

with phase changes such as from the liquid to the solid Stefan problems have some characteristics that are typical of them but certain problems arising in fields such as mathematical physics and engineering also exhibit characteristics similar to them The term classical distinguishes the formulation of these problems from their weak formulation in which the solution need not possess classical derivatives Under suitable assumptions a weak solution could be as good as a classical solution In hyperbolic Stefan problems the characteristic features of Stefan problems are present but unlike in Stefan problems discontinuous solutions are allowed because of the hyperbolic nature of the heat equation The numerical solutions of inverse Stefan problems and the analysis of direct Stefan problems are so integrated that it is difficult to discuss one without referring to the other So no strict line of demarcation can be identified between a classical Stefan problem and other similar problems On the other hand including every related problem in the domain of classical Stefan problem would require several volumes for their description A suitable compromise has to be made The basic concepts modelling and analysis of the classical Stefan problems have been extensively investigated and there seems to be a need to report the results at one place This book attempts to answer that need

Exergy Analysis and Thermoeconomics of Buildings Jose M Sala-Lizarraga, Ana Picallo-Perez, 2019-10-01 Quantifying exergy losses in the energy supply system of buildings reveals the potential for energy improvement which cannot be discovered using conventional energy analysis Thermoeconomics combines economic and thermodynamic analysis by applying the concept of cost an economic concept to exergy as exergy is a thermodynamic property fit for this purpose in that it combines the quantity of energy with its quality factor Exergy Analysis and Thermoeconomics of Buildings applies exergy analysis methods and thermoeconomics to the built environment The mechanisms of heat transfer throughout the envelope of buildings are analyzed from an exergy perspective and then to the building thermal installations analyzing the different components such as condensing boilers absorption refrigerators microcogeneration plants etc including solar installations and finally the thermal facilities as a whole A detailed analysis of the cost formation process is presented which has its physical roots firmly planted in the second law of thermodynamics The basic principles and the rules of cost allocation in energy units exergy cost in monetary units exergoeconomic cost and in CO₂ emissions exergoenvironmental cost based on the so called Exergy Cost Theory are presented and applied to thermal installations of buildings Clear and rigorous in its exposition Exergy Analysis and Thermoeconomics of Buildings discusses exergy analysis and thermoeconomics and the role they could play in the analysis and design of building components either the envelope or the thermal facilities as well as the diagnosis of thermal installations This book moves progressively from introducing the basic concepts to applying them Exergy Analysis and Thermoeconomics of Buildings provides examples of specific cases throughout this book These cases include real data so that the results obtained are useful to interpret the inefficiencies and losses that truly occur in actual installations hence the assessment of their effects encourages the manner to improve efficiency Applies exergy analysis methods for the installation of building thermal facilities equipment

components including pipes valves heat exchangers boilers and heat pumps Helps readers determine the operational costs of heating and cooling building systems Includes exergy analysis methods that are devoted to absorption refrigerators adsorption cooling systems basic air conditioning processes ventilation systems and solar systems either thermal and PV Discusses the direct application of exergy analysis concepts including examples of buildings with typical heating DHW and air conditioning installations

Macroscopic And Statistical Thermodynamics: Expanded English Edition Yi-chen Cheng, 2006-08-08 This textbook addresses the key questions in both classical thermodynamics and statistical thermodynamics Why are the thermodynamic properties of a nano sized system different from those of a macroscopic system of the same substance Why and how is entropy defined in thermodynamics and how is the entropy change calculated when dissipative heat is involved What is an ensemble and why is its theory so successful Translated from a highly successful Chinese book this expanded English edition contains many updated sections and several new ones They include the introduction of the grand canonical ensemble the grand partition function and its application to ideal quantum gases a discussion of the mean field theory of the Ising model and the phenomenon of ferromagnetism as well as a more detailed discussion of ideal quantum gases near $T = 0$ for both Fermi and Bose gases

McPherson, 2018-12-20 This third edition textbook provides the basics of reliability physics and engineering that are needed by electrical engineers mechanical engineers civil engineers biomedical engineers materials scientists and applied physicists to help them to build better devices products The information contained within should help all fields of engineering to develop better methodologies for more reliable product designs more reliable materials selections and more reliable manufacturing processes all of which should help to improve product reliability A mathematics level through differential equations is needed Also a familiarity with the use of excel spreadsheets is assumed Any needed statistical training and tools are contained within the text While device failure is a statistical process thus making statistics important the emphasis of this book is clearly on the physics of failure and developing the reliability engineering tools required for product improvements during device design and device fabrication phases *The Britannica Guide to Matter* Erik Gregersen Associate Editor, Astronomy and Space Exploration, 2011-01-15 The study of matter is the study of all material things as well as their ability to transform from one state to another All matter assumes one of several basic states solid liquid gas and plasma being the most common Under varying conditions each state can be altered to form new substances or adopt new characteristics This insightful book covers the various structures and elements of different types of matter while examining the physical and chemical properties that allow for permutation and change **Rarefied Gas Dynamics** Felix Sharipov, 2015-11-16 Aimed at both researchers and professionals who deal with this topic in their routine work this introduction provides a coherent and rigorous access to the field including relevant methods for practical applications No preceding knowledge of gas dynamics is assumed **Creep in Structures** Michal Zyczkowski, 2013-03-08 There is a tradition to organize IUTAM Symposia Creep in Structures every ten years the first Symposium was organized by N J Hoff in Stanford 1960 the second one by J Hult in Goteborg 1970 and the third one by A R S Ponter in Leicester 1980 The fourth Symposium in Cracow September 1990 gathered 123 participants from 21 countries and reflected rapid development of the theory experimental research and structural applications of creep and viscoplasticity including damage and rupture Indeed the scope of the Symposium was broad maybe even too broad but it was kept according to the tradition Probably the chairman of Creep in Structures V in the year 2000 if organized at all will be forced to confine the scope substantially Participation in the Symposium was reserved for invited participants suggested by members of the Scientific Committee Total number of suggestions was very large and the response unexpectedly high Apart from several papers rejected as being out of scope over 100 papers were accepted for presentation A somewhat unconventional way of presentation was introduced to provide ample time for fruitful and well prepared discussions besides general lectures 30 minutes each all the remaining papers were presented as short introductory lectures 10 minutes followed by a 1 hour poster discussion with the authors and then by a general discussion Such an approach made it possible to present general ideas orally and then to

discuss all the papers through and through
