Lessons amid the Rubble Sarah K.A. Pfatteicher, 2010-10-15 The aftermath of September 11 2001 brought the subject of engineering failure forensics to public

attention as had no previous catastrophe. In keeping with the engineering profession's long tradition of building a positive future out of disasters, *Lessons Amid the Rubble* uses the collapse of the World Trade Center towers to explore the nature and future of engineering education in the United States. Sarah K. A. Pfatteicher draws on historical and current practice in engineering design, construction, and curricula to discuss how engineers should conceive, organize, and execute a search for the reasons behind the failure of man-made structures. Her survey traces the analytical journey engineers take after a disaster and discusses the technical, social, and moral implications of their work. After providing an overview of the investigations into the collapse of the Twin Towers, Pfatteicher explores six related events to reveal deceptively simple lessons about the engineering enterprise, each of which embodies an ethical dilemma at the heart of the profession. In tying these themes together, Pfatteicher highlights issues of professionalism and professional identity infused in engineering education and encourages an explicit, direct conversation about their meaning. Sophisticated and engagingly written, this volume combines history, engineering ethics, and philosophy to provoke a deep discussion about the symbolic meaning of buildings and other structures and the nature of engineering.

Forensic Human Factors and Ergonomics Michael S. Wogalter, 2018-09-03. This book has 18 case study chapters investigating various injury scenarios through the use of a Human Factors and Ergonomics (HFE) analysis. Each injury scenario derives from one or more similar lawsuits, but names, places, and some of the details are fictionalized. The scenarios describe a slice of life of people interacting with products, equipment, tasks, and environments before they are seriously hurt. The forensic analysis that follows each scenario gives a background of prior similar events and systematically examines potential causes leading to the injury event. There is emphasis on the person-machine interface, human error, hazard analysis, hazard control, and a model of communication, human information processing, and HIP. Chapters are authored by highly experienced expert witnesses in HFE. The methods used are general techniques that can be applied to other injury scenarios but would be better if employed earlier in a product's life cycle to prevent or limit injury. The first three chapters introduce concepts useful for the analyses in the case study chapters. The last chapter offers some broad take-away points that cut across several of the case studies. Features contributions by persons who have extensive experience in HFE and who have served professionally in the role of an expert witness in various legal cases, mostly in product liability. Gives a broad range of situations to illustrate where HFE considerations could improve product or environmental safety. There is an emphasis on children, caregivers, and adult activities such as driving. Uses mitigation strategies to reduce the likelihood of occurrence and severity of adverse events. Includes a first-person scenario at the beginning of each chapter. Allows the lessons learned to be adaptable to other domains where people interact with products and environments.

The Problem of Health Technology Pascale Lehoux, 2014-06-03. Health technology is a pivotal locus of change and controversy in health care systems, and *The Problem of Health Technology* offers a comprehensive and novel analysis of the topic. The book illuminates the scientific and policy arguments that are currently deployed in industrialized

countries by addressing the perspectives of clinicians health care managers scholars policymakers patients and industry And by establishing a dialogue between two interdisciplinary fields Health Technology Assessment and Science and Technology Studies Pascale Lehoux argues for re centering the debate around social and political questions rather than questions of affordability thereby developing an alternative framework for thinking about the implications of health technology
