The Death of Aztec Tenochtitlan, the Life of Mexico City Barbara E. Mundy,2018-03-22 Winner Book Prize in Latin American Studies Colonial Section of Latin American Studies Association LASA 2016 ALAA Book Award Association for Latin American Art Arvey Foundation 2016 The capital of the Aztec empire Tenochtitlan was in its era one of the largest cities in the world Built on an island in the middle of a shallow lake its population numbered perhaps 150 000 with another 350 000 people in the urban network clustered around the lake shores In 1521 at the height of Tenochtitlan s power which extended over much of Central Mexico Hernando Cort s and his followers conquered the city Cort s boasted to King Charles V of Spain that Tenochtitlan was destroyed and razed to the ground But was it Drawing on period representations of the city in sculptures texts and maps The Death of Aztec Tenochtitlan the Life of Mexico City builds a convincing case that this global capital remained through the sixteenth century very much an Amerindian city Barbara E Mundy foregrounds the role the city s indigenous peoples the Nahua played in shaping Mexico City through the construction of permanent architecture and engagement in ceremonial actions She demonstrates that the Aztec ruling elites who retained power even after the conquest were instrumental in building and then rebuilding the city Mundy shows how the Nahua entered into mutually advantageous alliances with the Franciscans to maintain the city s sacred nodes She also focuses on the practical and symbolic role of the city s extraordinary waterworks the product of a massive ecological manipulation begun in the fifteenth century to reveal how the Nahua struggled to maintain control of water resources in early Mexico City

Modern Construction Lincoln H. Forbes,Syed M. Ahmed,2010-10-13 During the past several decades the manufacturing and service industries significantly increased their levels of productivity quality and profitability through the application of process improvement techniques and information technology Unfortunately the construction industry lags far behind in the application of performance improvement and optimization techniques as well as its overall competitiveness Written by Lincoln H Forbes and Syed M Ahmed both highly regarded for leadership and innovation Modern Construction Lean Project Delivery and Integrated Practices offers cutting edge lean tools and other productive strategies for the management of people and processes in the construction industry Drs Forbes and Ahmed focus mainly on lean construction methodologies such as The Last Planner R System The Lean Project Delivery System TM and Integrated Project Delivery TM The tools and strategies offered draw on the success of the world renowned Toyota Production System TPS adapted to the construction environment by construction professionals and researchers involved in developing and advocating lean construction methods The book also discusses why true lean construction can best occur when all the construction stakeholders owners designers constructors and material suppliers are

committed to the concept of optimizing the flow of activities holistically while de emphasizing their self interest The authors also reintroduce process improvement approaches such as TQM and Six Sigma as a foundation for the adoption of lean methodologies and demonstrate how these methods can improve projects in a so called traditional environment The book integrates these methods with emerging interest in green construction and the use of information technology and Building Information Modeling BIM while recognizing the human element in relation to motivation safety and environmental stresses Written specifically for professionals in an industry that desperately needs to play catch up the book delineates cutting edge approaches with the benefit of successful cases and explains how their deployment can improve construction performance and competitiveness

Democracy and Public Space John Parkinson,2012 In an online interconnected world democracy is increasingly made up of wikis and blogs pokes and tweets Citizens have become accidental journalists thanks to their handheld devices politicians are increasingly working online and the traditional sites of democracy assemblies public galleries and plazas are becoming less and less relevant with every new technology And yet this book argues such views are leading us to confuse the medium with the message focusing on electronic transmission when often what cyber citizens transmit is pictures and narratives of real democratic action in physical space Democratic citizens are embodied take up space battle over access to physical resources and perform democracy on physical stages at least as much as they engage with ideas in virtual space Combining conceptual analysis with interviews and observation in capital cities on every continent John Parkinson argues that democracy requires physical public space that some kinds of space are better for performing some democratic roles than others and that some of the most valuable kinds of space are under attack in developed democracies He argues that accidental publics like shoppers and lunchtime crowds are increasingly valued over purposive active publics over citizens with a point to make or an argument to listen to This can be seen not just in the way that traditional protest is regulated but in the ways that ordinary city streets and parks are managed even in the design of such quintessentially democratic spaces as legislative assemblies The book offers an alternative vision for democratic public space and evaluates 11 cities from London to Tokyo against that ideal
