Nanoparticle Design and Characterization for Catalytic Applications in Sustainable Chemistry Rafael Luque,Pepijn Prinsen,2019-05-10 Nanoparticles exhibit a range of different properties when compared to bulk materials Their high surface area to volume ratio makes them particularly attractive for use as catalysts and recent years have seen an explosion of research in this area The ability to fine tune the size and structure of nanoparticles means that it is possible to design catalytic materials for improved activity or specificity As catalysis is one of the key technologies for more sustainable production of both chemicals and energy the past few years have seen increasing numbers of nanomaterials reported for these applications Depending on the application a number of different catalyst synthesis and optimization protocols can be used This book provides comprehensive links between the design and fabrication method for nanoparticles and their catalytic performance activity selectivity and stability in various applications Presenting an introduction to the concept of catalyst design and recent developments in the preparation and characterisation of nanomaterials followed by several chapters on the design of catalysts for specific applications this book is a valuable resource for researchers working on catalytic reactions industrial processes and nanomaterial applications

Emerging Non-destructive Technologies for Food Quality Analysis C. K. Sunil,Ashish Rawson,D. V. Chidanand,S.

Shanmugasundaram,2025-09-26 Non destructive quality analysis refers to a method of food testing that is designed explicitly to eliminate the potential of damage to the food quality There are various techniques by which this approach may be applied all of which are being used recently for quality analysis which provides important information on food characteristics such as texture structure and mechanical physical and chemical properties Conventional methods of quality analysis are time consuming expensive and invasive in nature particularly for long duration analysis Non destructive methods have thus become highly appealing for their potential to reduce cost and waste and to shorten processing times These approaches not only preserve the integrity of the product but also expedite the analysis process The most common non destructive methods used include machine vision Spectroscopy E nose tongue Ultrasonics and hyperspectral imaging among others While these methods have been in practice for some time the technological advancements of the last decade have improved the precision and reliability of these tools making them more popular An overview of the dominant non destructive methods including the more novel technologies such as biosensors and terahertz application have not until now been comprehensively covered in the form of a research volume Emerging Non destructive Technologies for Food Quality Analysis brings together detailed information on all these most current advances in technology and elucidates their application in food processing Covering theory principle recent advances and practical applications in food analysis this book will be an invaluable reference for

Masters Theses in the Pure and Applied Sciences Wade H. Shafer,1996-04-30 Masters Theses in the Pure and Applied Sciences was first conceived published and disseminated by the Center for Information and Numerical Data Analysis and Synthesis CINDAS at Purdue University in 1957 starting its coverage of theses with the academic year 1955 Beginning with Volume 13 the printing and dissemination phases of the activity were transferred to University Microfilms Xerox of Ann Arbor Michigan with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an international publishing house to assure improved service and broader dissemination Hence starting with Volume 18 Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York and in the same year the coverage was broadened to include Canadian universities All back issues can also be ordered from Plenum We have reported in Volume 39 thesis year 1994 a total of 13 953 thesis titles from 21 Canadian and 159 United States universities We are sure that this broader base for these titles reported will greatly enhance the value of this important annual reference work While Volume 39 reports theses submitted in 1994 on occasion certain universities do report theses submitted in previous years but not reported at the time **Optical Engineering** ,2001-10 Publishes papers reporting on research and development in optical science and engineering and the practical applications of known optical science engineering and technology **Proceedings of the ASME Manufacturing Engineering Division ...** ,2003 *Design and Process Integration for Microelectronic Manufacturing II* Alexander Starikov,Society of Photo-optical Instrumentation Engineers,2003
