Introduction to Python and Spice for Electrical and Computer Engineers James C. Squire, Anthony E. English, 2024-10-04 Introduction to Python and Spice for Electrical and Computer Engineers introduces freshman and sophomore engineering students to programming in Python and Spice through engaged problem based learning and dedicated Electrical and Computer Engineering content This book draws its problems and examples specifically from Electrical and Computer Engineering covering such topics as matrix algebra complex exponentials and plotting using examples drawn from circuit analysis signal processing and filter design It teaches relevant computation techniques in the context of solving common problems in Electrical and Computer Engineering This book is unique among Python textbooks for its dual focus on introductory level learning and discipline specific content in Electrical and Computer Engineering No other textbook on the market currently targets this audience with the same attention to discipline specific content and engaged learning practices Although it is primarily an introduction to programming in Python the book also has a chapter on circuit simulation using

Spice It also includes materials helpful for ABET accreditation such information on professional development ethics and lifelong learning Introduces Electrical and Computer Engineering specific topics such as phasor analysis and complex exponentials that are not covered in generic engineering Python texts Pedagogically appropriate for freshmen and sophomores with little or no prior programming experience Teaches both scripts and functions but emphasizes the use of functions since scripts with nonscoped variables are less commonly encountered after introductory courses Covers graphics before more abstract programming supporting early student confidence Introduces Python commands as needed to solve progressively more complex EE ECE specific problems and includes over 100 embedded in chapter questions to check comprehension in stages *Power Integrity for Electrical and Computer Engineers* J. Manassah, 2017-12-19 Engineers around the world depend on MATLAB for its power usability and outstanding graphics capabilities Yet too often engineering students are either left on their own to acquire the background they need to use MATLAB or they must learn the program concurrently within an advanced course Both of these options delay students from solving realistic design problems especially when they do not have a text focused on applications relevant to their field and written at the appropriate level of mathematics Ideal for use as a short course textbook and for self study Elementary Mathematical and Computational Tools for Electrical and Computer Engineers Using MATLAB fills that gap Accessible after just one semester of calculus it introduces the many practical analytical and numerical tools that are essential to success both in future studies and in professional life Sharply focused on the needs of the electrical and computer engineering communities the text provides a wealth of relevant exercises and design problems Changes in MATLAB's version 6.0 are included in a special addendum The lack of skills in fundamental quantitative tools can seriously impede progress in one's engineering studies or career By working through this text either in a lecture lab environment or by themselves readers will not only begin mastering MATLAB but they will also hone their analytical and computational skills to a level that will help them to enjoy and succeed in subsequent electrical and computer engineering pursuits *Outlines and Highlights for Design for Electrical and Computer Engineers* by Ralph M Ford Cram101 Textbook Reviews, 2011-08-01 Never HIGHLIGHT a Book Again Virtually all of the testable terms concepts persons places and events from the textbook are included Cram101 Just the FACTS101 studyguides give all of the outlines highlights notes and quizzes for your textbook with optional online comprehensive practice tests Only Cram101 is Textbook Specific Accompanys 9780073380353 **Applied Electromagnetics** Stuart M.
