Diophantine Geometry An Introduction 1st Edition

John Ratcliffe

Diophantine Geometry An Introduction 1st Edition:

Diophantine Geometry Marc Hindry, Joseph H. Silverman, 2013-12-01 This is an introduction to diophantine geometry at the advanced graduate level The book contains a proof of the Mordell conjecture which will make it quite attractive to graduate students and professional mathematicians In each part of the book the reader will find numerous exercises

Foundations of Hyperbolic Manifolds John Ratcliffe, 2006-11-25 This heavily class tested book is an exposition of the theoretical foundations of hyperbolic manifolds It is both a textbook and a reference A basic knowledge of algebra and topology at the first year graduate level of an American university is assumed The first part is concerned with hyperbolic geometry and discrete groups The second part is devoted to the theory of hyperbolic manifolds The third part integrates the first two parts in a development of the theory of hyperbolic orbifolds Each chapter contains exercises and a section of historical remarks A solutions manual is available separately

A First Course in Noncommutative Rings Tsit-Yuen Lam, 2001-06-21 Aimed at the novice rather than the connoisseur and stressing the role of examples and motivation this text is suitable not only for use in a graduate course but also for self study in the subject by interested graduate students More than 400 exercises testing the understanding of the general theory in the text are included in this new edition

A First Course in Modular Forms Fred Diamond, Jerry Shurman, 2006-03-30 This book introduces the theory of modular forms with an eye toward the Modularity Theorem All rational elliptic curves arise from modular forms The topics covered include elliptic curves as complex tori and as algebraic curves modular curves as Riemann surfaces and as algebraic curves Hecke operators and Atkin Lehner theory Hecke eigenforms and their arithmetic properties the Jacobians of modular curves and the Abelian varieties associated to Hecke eigenforms elliptic and modular curves modulo p and the Eichler Shimura Relation the Galois representations associated to elliptic curves and to Hecke eigenforms As it presents these ideas the book states the Modularity Theorem in various forms relating them to each other and touching on their applications to number theory

A First Course in Modular Forms is written for beginning graduate students and advanced undergraduates It does not require background in algebraic number theory or algebraic geometry and it contains exercises throughout Fred Diamond received his Ph D from Princeton University in 1988 under the direction of Andrew Wiles and now teaches at King's College London Jerry Shurman received his Ph D from Princeton University in 1988 under the direction of Goro Shimura and now teaches at Reed College

From Holomorphic Functions to Complex Manifolds Klaus Fritzsche, Hans Grauert, 2012-12-06 The aim of this book is to give an understandable introduction to the theory of complex manifolds With very few exceptions we give complete proofs Many examples and figures along with quite a few exercises are included Our intent is to familiarize the reader with the most important branches and methods in complex analysis of several variables and to do this as simply as possible Therefore the abstract concepts involved with sheaves coherence and higher dimensional cohomology are avoided Only elementary methods such as power series holomorphic vector bundles and one dimensional co cycles are used

Nevertheless deep results can be proved for example the Remmert Stein theorem for analytic sets finiteness theorems for spaces of cross sections in holomorphic vector bundles and the solution of the Levi problem The first chapter deals with holomorphic functions defined in open sub sets of the space $\mathbb{C}^n$ Many of the well known properties of holomorphic functions of one variable such as the Cauchy integral formula or the maximum principle can be applied directly to obtain corresponding properties of holomorphic functions of several variables Furthermore certain properties of differentiable functions of several variables such as the implicit and inverse function theorems extend easily to holomorphic functions **A**

First Course in Calculus Serge Lang, 2012-09-17 The purpose of a first course in calculus is to teach the student the basic notions of derivative and integral and the basic techniques and applications which accompany them The very talented students with an obvious aptitude for mathematics will rapidly require a course in functions of one real variable more or less as it is understood by professional is not primarily addressed to them although mathematicians This book I hope they will be able to acquire from it a good introduction at an early age I have not written this course in the style I would use for an advanced monograph on sophisticated topics One writes an advanced monograph for oneself because one wants to give permanent form to one's vision of some beautiful part of mathematics not otherwise accessible somewhat in the manner of a composer setting down his symphony in musical notation This book is written for the students to give them an immediate and pleasant access to the subject I hope that I have struck a proper compromise between dwelling too much on special details and not giving enough technical exercises necessary to acquire the desired familiarity with the subject In any case certain routine habits of sophisticated mathematicians are unsuitable for a first course Rigor This does not mean that so called rigor has to be abandoned

Short Calculus Serge Lang, 2001-11-29 From the reviews This is a reprint of the original edition of Lang's *A First Course in Calculus* which was first published in 1964 The treatment is as rigorous as any mathematician would wish it The exercises are refreshingly simply stated without any extraneous verbiage and at times quite challenging There are answers to all the exercises set and some supplementary problems on each topic to tax even the most able Mathematical Gazette *Catalog of Copyright Entries. Third Series* Library of Congress. Copyright Office, 1964

Includes Part 1 Number 2 Books and Pamphlets Including Serials and Contributions to Periodicals July December **The British National Bibliography** Arthur James Wells, 2005 **Lectures in Abstract Algebra: Theory of fields and Galois theory** Nathan Jacobson, 1964 The three volume Lectures are based on Jacobson's graduate lectures on algebra at Johns Hopkins and Yale in the 1940's and early 1950's and are very careful comprehensive and classical in style giving a general treatment of abstract algebra The first volume gives a comprehensive introduction to abstract algebra and its basic concepts The second volume deals with the theory of vector spaces accompanied by examples and exercises The third and final volume addresses field theory and Galois theory and is not an easy read for the casual student but a serious student who works at the material will be repaid for their efforts All volumes include a considerable number of exercises are given that vary greatly in
