**Redistributing Health** Thomas Allan McIntosh, Bonnie Jeffery, Nazeem Muhajarine, 2010 What too few people

realize is that as Andre Picard writes in his Foreword to *Redistributing Health* social justice or lack thereof has a greater impact on the health of the population than the human genome lifestyle choice and medical treatment The truth is that things like poverty social exclusion lack of meaningful employment and lack of access to education or good housing contribute significantly to ill health in Canada and none of these will be remedied by doctors or hospitals or pill bottles

**The Human World in the Physical Universe** Nicholas Maxwell,2001-09-24 How is it possible for the world as we experience it to exist embedded in the physical universe How can there be sensory qualities consciousness freedom science and art friendship love justice all that which gives meaning and value to life if the world really is more or less as modern science tells us it is This is the problem that is tackled by this book The solution proposed is that physics describes only a selected aspect of all that exists that aspect which determines the way events unfold Sensory qualities inner experiences consciousness meaning and value all these exist but lie beyond the scope of physics and of that part of science that can be reduced to physics Furthermore these human features of the world are to be explained and understood not scientifically but personalistically a kind of understanding distinct from and not reducible to science This view that the world is riddled with what may be called double comprehensibility leads to a proposed solution to the philosophical mind body problem and to the problem of free will it leads to a reinterpretation of Darwin s theory of evolution and to an account of the evolution of consciousness and free will After a discussion of the location of consciousness in the brain the book concludes with a proposal as to how academic inquiry might be changed so that it becomes a kind of inquiry rationally designed to help humanity create a more civilized human world in the physical universe

*The Material Life of Human Beings* Michael Brian Schiffer,2002-01-22 In this ground breaking work the distinguished anthropological theorist Michael Brian Schiffer presents a profound challenge to the social sciences Through a broad range of examples he demonstrates how theories of behaviour and communication have too often ignored the fundamental importance of objects in human life In *The Material Life of Human Beings* the author builds upon the premise that the most important feature of human life is not language but the relationships which take place

between people and objects The author shows that artifacts are involved in all modes of human communication be they visual auditory or tactile By creatively folding elements of postmodernist thought into a scientific framework he creates new concepts and models for understanding and analysing communication and behavior Challenging established theories within the social sciences Michael Brian Schiffer offers a reassessment of the centrality of materiality to everyday life **The Foundations of Institutional Economics** Karl William Kapp,2011 K William Kapp was one of the leading 20 th century institutionalists and a founding member of the Association for Evolutionary Economics This book was developed by Kapp and is his attempt to present the foundations of institutional economics though has remained unfinished and unpublished during the last 30 years since his death Carefully edited with additional material from some of Kapp s other major works and with a full introduction from Sebasitan Berger and Rolf Steppacher this book represents a major reappraisal of Kapp s contribution

approve Adrian Conan Doyle      **On the Contexts of Things Human** Ronald J. MacGregor,2006 The study of isoperimetric inequalities involves a fascinating interplay of analysis geometry and the theory of partial differential equations Several conjectures have been made and while many have been resolved a large number still remain open One of the principal tools in the study of isoperimetric problems especially when spherical symmetry is involved is Schwarz symmetrization which is also known as the spherically symmetric and decreasing rearrangement of functions The aim of this book is to give an introduction to the theory of Schwarz symmetrization and study some of its applications The book gives an modern and up to date treatment of the subject and includes several new results proved recently Effort has been made to keep the exposition as simple and self contained as possible A knowledge of the existence theory of weak solutions of elliptic partial differential equations in Sobolev spaces is however assumed Apart from this and a general mathematical maturity at the graduate level there are no other prerequisites      Explorations and Proposals toward Market Socialism and World Government James A. Yunker,2022-09-26 This book blends real world history intellectual history and personal history into a compelling case for a new way of thinking about such highly controversial and highly misunderstood concepts as market socialism a Global Marshall Plan and world government It argues that if properly designed according to clear and specific blueprints all three of these possibilities would indeed greatly benefit humanity if they were fully implemented The book puts a human face on these proposals by documenting their origin and development through a detailed account of the author's professional efforts over a long and productive academic career This story of steadfast determination in the face of steep odds will resonate deeply with every person who has nourished a vision that is commonly dismissed as excessively idealistic and unrealistic

Natural Religion Frederick Turner,2011-12-31 There is widespread belief that the world's religions contradict each other It follows that if one religion is true the others must be false an assumption that implies and may actually create religious strife In Natural Religion acclaimed poet critic and essayist Frederick Turner sets out to show that the natural world offers grounds for stating that all religions are in some respect true Through the ages various ways have been proposed to resolve religious differences Some argue for the destruction of all religions but one's own Others substitute an abstract principle for the real ritual and moral practice of religion Still others doubt all religious truth and consequently all truth Others accept a kind of pluralistic relativism This book explores syncretism whereby all religions are seen as grasping the same strange and complex reality but by very different means and handles The idea that all religions are true raises a supervening question if so what must the real physical universe be like Turner approaches these questions in terms of scientific inquiry There is not enough room in space itself to fit in all theologies but there may be enough room in time if new scientific descriptions of time's nature are to be believed Turner argues that in the time models of contemporary cosmological and evolutionary science all times may be connected and time may be infinitely branched and causally looped so that both forward in time and backward in time factors may be in operation in the same event Thus the fundamental substance of the universe may be information

rather than matter or energy The universe is more like a vast living organism than a vast machine Turner argues that all existing religions can be shown to fit into this model which in turn points to deeper implications of religious doctrines languages and practices There would be plenty of room in such a view of time for a tree of different yet linked religious worlds and poetic language may be the most effective tool for describing the divine
