Differential Equations: A Dynamical Systems Approach John H. Hubbard, Beverly H. West, 2012-12-06 Mathematics is playing an ever more important role in the physical and biological sciences provoking a blurring of boundaries between scientific disciplines and a resurgence of interest in the modern as well as the classical techniques of applied mathematics This renewal of interest both in research and teaching had led to the establishment of the series Texts in Applied Mathematics TAM The development of new courses is a natural consequence of a high level of excitement on the research frontier as newer techniques such as numerical and symbolic computer systems dynamical systems and chaos mix with and

reinforce the traditional methods of applied mathematics. Thus the purpose of this textbook series is to meet the current and future needs of these advances and encourage the teaching of new courses. TAM will publish textbooks suitable for use in advanced undergraduate and beginning graduate courses and will complement the Applied Mathematical Sciences AMS series which will focus on advanced textbooks and research level monographs.

Preface As in Part I this book concentrates on understanding the behavior of differential equations rather than on solving the equations. Part I focused on differential equations in one dimension; this volume attempts to understand differential equations in n dimensions. The existence and uniqueness theory carries over with almost no changes.

Morse Theoretic Methods in Nonlinear Analysis and in Symplectic Topology Paul Biran, Octav Cornea, François Lalonde, 2006-02-12. The papers collected in this volume are contributions to the 43rd session of the Séminaire de mathématiques supérieures SMS on Morse Theoretic Methods in Nonlinear Analysis and Symplectic Topology. This session took place at the Université de Montréal in July 2004 and was a NATO Advanced Study Institute ASI. The aim of the ASI was to bring together young researchers from various parts of the world and to present to them some of the most significant recent advances in these areas. More than 77 mathematicians from 17 countries followed the 12 series of lectures and participated in the lively exchange of ideas. The lectures covered an ample spectrum of subjects which are reflected in the present volume: Morse theory and related techniques in infinite dimensional spaces; Floer theory and its recent extensions and generalizations; Morse and Floer theory in relation to string topology; generating functions; structure of the group of Hamiltonian diffeomorphisms and related dynamical problems; applications to robotics and many others. We thank all our main speakers for their stimulating lectures and all participants for creating a friendly atmosphere during the meeting. We also thank Ms Diane Belanger, our administrative assistant, for her help with the organization and Mr André Montpetit, our technical editor, for his help in the preparation of the volume.

Quantum and Stochastic Mathematical Physics Astrid Hilbert, Elisa Mastrogiacomio, Sonia Mazzucchi, Barbara Rüdiger, Stefania Ugolini, 2023-04-02 Sergio Albeverio gave important contributions to many fields ranging from Physics to Mathematics while creating new research areas from their interplay Some of them are presented in this Volume that grew out of the Random Transformations and Invariance in Stochastic Dynamics Workshop held in Verona in 2019 To understand the theory of thermo and fluid dynamics statistical mechanics quantum mechanics and quantum field theory Albeverio and his collaborators developed stochastic theories having strong interplays with operator theory and functional analysis His contribution to the theory of non Gaussian SPDEs the related theory of pseudo differential operators and ergodic theory had several impacts to solve problems related among other topics to thermo and fluid dynamics His scientific works in the theory of interacting particles and its extension to configuration spaces lead e.g. to the solution of open problems in statistical mechanics and quantum field theory Together with Raphael Hoegh Krohn he introduced the theory of infinite dimensional Dirichlet forms which nowadays is used in many different contexts and new methods in the theory of Feynman path integration He did not fear to further develop different methods in Mathematics like e.g. the theory of non standard analysis and p-adic numbers
