Statistical Image Processing and Multidimensional Modeling Paul Fieguth, 2010-10-17 Images are all around us The proliferation of low cost high quality imaging devices has led to an explosion in acquired images When these images are acquired from a microscope telescope satellite or medical imaging device there is a statistical image processing task the inference of something an artery a road a DNA marker an oil spill from imagery possibly noisy blurry or incomplete A great many textbooks have been written on image processing However this book does not so much focus on images per se but rather on spatial data sets with one or more measurements taken over a two or higher dimensional space and to which standard image processing algorithms may not apply There are many important data analysis methods developed in this text for such statistical image problems Examples abound throughout remote sensing satellite data mapping data assimilation climate change studies land use medical imaging organ segmentation anomaly detection computer vision image classification segmentation and other 2D 3D problems biological imaging porous media The goal then of this text is to address methods for solving multidimensional statistical problems The text strikes a balance between mathematics and theory on the one hand versus applications and algorithms on the other by deliberately developing the basic theory Part I the mathematical modeling Part II and the algorithmic and numerical methods Part III of solving a given problem The particular emphases of the book include inverse problems multidimensional modeling random fields and hierarchical methods

Computed Radiation Imaging Esam M A Hussein, 2011-05-27 Computer assisted imaging with radiation x and gamma rays is an integral part of modern medical diagnostic practice This imaging technology is also slowly finding its way into industrial applications Although the technology is well developed there is a need for further improvement to enhance image quality reduce artifacts minimize patient radiation exposure compete with and complement other imaging methods such as magnetic resonance imaging and ultrasonics and accommodate dense and large objects encountered in industrial applications Scientists and engineers attempting to progress this technology are faced with an enormous amount of literature addressing the imaging problem from various view points This book provides a single source that addresses both the physical and mathematical aspects of the imaging problem in a consistent and comprehensive manner Discusses the inherent physical and numerical capabilities and limitations of the methods presented for both the forward and inverse problems Provides information on available Internet

resources and software Written in a manner that makes it readable by physicists mathematicians engineers and computer scientists avoids as much as possible the use of specialized terminology without clear introduction and definition
