Topics in Cryptology - CT-RSA 2001 David Naccache, 2003-06-29 You are holding the first in a hopefully long and successful series of RSA Cryptographers Track proceedings The Cryptographers Track CT-RSA is one of the many parallel tracks of the yearly RSA Conference Other sessions deal with government projects law and policy issues freedom and privacy news analysts opinions standards ASPs biotech and healthcare nanotechnology telecom and wireless security developers new products implementers threats RSA products VPNs as well as cryptography and enterprise tutorials RSA Conference 2001 is expected to continue the tradition and remain the largest computer security event ever staged 250 vendors 10 000 visitors and 3 000 class going attendees are expected in San Francisco next year I am very grateful to the 22 members of the program committee for their hard work The program committee received 65 submissions one of which was later withdrawn for which review was conducted electronically almost all papers had at least two reviews although most had three or more Eventually we accepted the 33 papers that appear in these proceedings Revisions were not checked on their scientific aspects and some authors will write final versions of their papers for publication in refereed journals As is usual authors bear full scientific and paternity responsibilities for the contents of their papers

Analysis, Architectures and Modelling of Embedded Systems Achim Rettberg, Mauro C. Zanella, Michael Amann, Michael Keckeisen, Franz J. Rammig, 2009-09-04 This book presents the technical program of the International Embedded Systems Symposium IESS 2009 Timely topics techniques and trends in embedded system design are covered by the chapters in this volume including modelling simulation verification test scheduling platforms and processors Particular emphasis is paid to automotive systems and wireless sensor networks Sets of actual case studies in the area of embedded system design are also included Over recent years embedded systems have gained an enormous amount of processing power and functionality and now enter numerous application areas due to the fact that many of the formerly external components can now be integrated into a single System on Chip This tendency has resulted in a dramatic reduction in the size and cost of embedded systems As a unique technology the design of embedded systems is an essential element of many innovations Embedded systems meet their performance goals including real time constraints through a combination of special purpose hardware and software components tailored to the system requirements Both the development of new features and the reuse of existing intellectual property components are essential to keeping up with ever more demanding customer requirements Furthermore design complexities are steadily growing with an increasing number of components that have to cooperate properly Embedded system designers have to cope with multiple goals and constraints simultaneously including timing power reliability dependability maintenance packaging and last but not least price
